Contents

ESSAYS

1. **Discuss the importance of diagnosis and treatment planning in Fixed Partial Denture.** *3*

2. **List the ideal requirements of an abutment tooth and describe the steps taken to maintain biological integrity while preparing teeth for Fixed Partial Denture.** *11*

3. **Describe various methods used for gingival retraction and add a note on the advantages of fluid control and tissue displacement.** *20*

4. **Describe the methods used to classify fixed bridges. Add a note on types of retainers used in Fixed Partial Dentures.** *28*

5. **Define and classify retainers. List the advantages and disadvantages of partial veneer crown over other types of retainers. What are the factors that come into play in the selection of retainers?** *35*

6. **Define retention and resistance form in Fixed Partial denture. What are the factors affecting retention and resistance in posterior tooth preparation?** *41*

7. **Classify finish lines. Enumerate the functions, indications, advantages and disadvantages of finish lines. Add a note on selection of type of finish line to be used.** *45*

8. **Illustrate with diagrams, the tooth preparation on right upper central incisor for receiving porcelain jacket crown. Add a note on the advantages, indications and contraindications of all-porcelain jacket crown.** *55*

9. **Define a crown and mention the advantages, disadvantages and indications of a full metal crown. Describe in detail, with diagrams, the step-by-step procedure in the preparation of a full metal crown on a mandibular first molar.** *61*

10. **Describe in detail, with diagrams, the step-by-step preparation of a maxillary canine to receive a three quarter crown. Explain and justify different impression techniques for fixed partial denture.** *67*

11. **Name the component parts of a bridge. Define and classify pontics. Add a note on selection of pontic design in anterior and posterior teeth. What are the requirements of a pontic?** *80*

12. **What are the biological, mechanical and aesthetic considerations in designing a pontic? Add a note on fabrication of pontics.** *89*

13. **Describe different types of provisional restorations. Describe various techniques used for making provisional restoration for anterior and posterior tooth preparation.** *96*

14. **Describe various luting agents used in crown and bridge cementing. Explain the procedure and care to be taken to lute porcelain jacket crowns.** *101*

15. **Classify adhesive bridges / resin bonded bridges. Cite the advantages, disadvantages, indications, contraindications and preparation steps. Add a note on types of bonding to metal and tooth.** *108*

16. **What are the requirements of dies? Describe materials used in preparation of dies and different techniques used for preparing dies?** *115*

17. **Classify ceramics. Enumerate its advantages and disadvantages. Explain the mechanism of bonding and describe the laboratory steps involved in fabrication of different ceramics.** *123*

18. **What are the types of veneering materials? Describe their advantages, disadvantages and indications. Add a note on the recent advances in veneering materials used in fixed partial denture.** *134*

SHORT NOTES

1. **Diagnostic aids in Fixed Partial Denture** *143*
2. **Importance of diagnostic casts** *144*
3. **Advantages, disadvantages, indications and contraindications of Fixed Partial Dentures** *145*
4. **Importance of radiologic examination in crown and bridge prosthesis** *147*
5. **Questionable abutments** *148*
6. **Mouth preparation in Fixed Partial Denture** *152*
7. **Requirements of a crown** *154*
8. **Double Arch impression technique** *156*
9. **Double mix technique** *158*
10. **Materials for gingival retraction** *160*
11. **Merits and demerits of anterior partial veneer crowns** *163*
12. **Types of finish lines** *165*
13. **Ante's law and its significance** *170*
14. **Types of Shoulder preparation** *173*
15. **Rigid connectors** *175*
16. **Soldering** *177*
17. **Cast core jacket crown** *181*
18. **Richmond crown** *189*
19. **Davis crown** *192*
20. **Axio-proximal grooves** *194*
21. **Pier abutment** *198*
22. **Causes of abutment failure** *201*
23. **Mesial half crown** *203*
24. **Cantilever fixed partial denture** *205*
25. **Pontics** *207*

26. Advantages and disadvantages of hygienic pontics and modified hygienic pontics *214*
27. Retention in Fixed Partial Denture *216*
28. Temporary protection of prepared tooth *219*
29. Articulators *221*
30. Fixed removable prosthodontics *224*
31. Dental laboratory form *227*
32. Die materials and different dies *229*
33. Spruing *230*
34. Flux and antiflux *232*
35. All ceramic restoration *233*
36. Resin bonded bridges *238*
37. Removable dies for Fixed Partial Denture *242*
38. Alloys used in Fixed Partial Denture *248*
39. Non-Rigid connectors/stress breakers in Fixed Partial Denture *251*
40. Wax patterns *253*
41. Functionally generated pathways (Meyer) *264*
42. Interocclusal records *267*
43. Lug seat *272*
44. Die spacer 274
45. Recall and maintenance *275*
46. Treating tilted molars *277*
47. Telescopic crown *279*
48. Finishing and polishing *280*
49. Use of reservoir during casting procedure *285*
50. Pickling *286*
51. Defects in casting *287*
52. Myofascial pain dysfunction syndrome *290*

53. Implant supported Fixed Partial Denture *293*
54. Full mouth rehabilitation *297*
55. Extracoronal retainer in Fixed Partial Denture *300*
56. Laboratory procedures in Fixed Partial Denture *305*
57. Tenso-frictional resistance *308*

Index *311*
