ABOUT THE BOOK

The goal of the authors when writing this book was to provide a textbook and a reference book for students, clinicians and academicians. It contains important and common cardiopulmonary dysfunctions encountered amongst patients. The book is divided into six sections depending on the content of the chapters comprising details of foundational concepts, clinical evaluation and investigations, physiotherapy techniques used in cardiopulmonary rehabilitation, common cardiopulmonary dysfunctions and rehabilitation. Clinical examples provide a clear understanding of the assessment and management processes. It is a unique depiction of all topics related to cardiopulmonary medicine and physiotherapy.

KEY FEATURES

- The information is presented in a well-defined manner and easily comprehensible language.
- Detailed description of the cardiopulmonary physiotherapy management and techniques.
- Provides variety of photographs depicting important clinical features and management strategies.
- Role of physiotherapy in infectious diseases including COVID-19 is highlighted.
- Clinical pointers have been provided for important points and clinical guidance.
- Integrated evidence with clinical practice.
- Clinical examples for ease of understanding.
- Review questions for exam going students.
