Contents

PART A: CLINICAL INVESTIGATOR AS A SCIENTIST

1. Evolution of the *Homo Sapiens* and his Mutant, the *Clinical Investigatoriens* ---------- 1

1.1 From the supernatural to the humans: Mythology, mystery, history, drug discovery and the pharmaceutical industry ---------- 1

1.2 Tragedies, culminating into regulations ---------- 10

2. Clinical Research: Dotted, Spotted, Colored and Flavored --------- 16

2.1 Types of research: A customized workshop ---------- 16

2.2 Experimental (animal) versus clinical research: Are humans vs guinea pigs or guinea pigs vs guinea pigs? --- 23

2.3 Diagnostic research: Developed a new method of PR examination: Read on ---------- 25

2.4 Observational studies versus clinical trials: From suspicion to spot on ---------- 32

2.5 Exploratory versus confirmatory trials: From proof of concept to concept of proof ---------- 39

2.6 Explanatory versus pragmatic trials: From efficacy to effectiveness ---------- 62

2.7 Sponsor-initiated versus investigator-initiated trials: Who pays? ---------- 65

2.8 Positive versus negative studies: From hopefulness to helplessness ---------- 71

2.9 Quality of life (QOL) aspects in clinical research: Increasingly gaining importance ---------- 75

3. The Protocol: "*Thou Shalt Pay Thy Obedience*" ---------- 85

3.1 What, why, how, who, where and when: The six servants of Sir Rudyard Kipling ---------- 85

3.2 Designing a protocol: The bare essentials (elements, functions and organization) ---------- 87

3.3 Protocol submission, amendments, resubmission, and approval: The teething problems and more ---------- 99

3.4 Protocol assessment: It is easier to see a speck in another's eye ---------- 102

4. The Case Report Form (CRF): Hardcore Proof of Your Work ---- 109
4.1 Purpose of the CRF : What is not recorded is not done ------- 109
4.2 CRF: The independent relation of the protocol ---------- 110
4.3 Filling of the CRF: Be particularly particular ---------- 114

5. Obtaining Informed Consent:
Essentially a Ritual or an Essential Ritual ---------- 117
5.1 Information: What, how much and how to inform? ---------- 117
5.2 Consent: Yes, I do ---------- 129
5.3 Designing the informed consent form:
A true exercise in reaching out to the patient ---------- 131

6. That Magical Phrase: GCPs (Good Clinical Practices) ---------- 136
6.1 Good clinical practices (GCPs): Is my clinical practice bad? - 136
6.2 Roles and responsibilities of various players:
A new commandment ---------- 140
6.3 Towards achieving GCP in developing countries:
Better late than never ---------- 143

7. Use of Surrogate Markers in Clinical Research:
Haste that does not Waste ---------- 150
7.1 Identification, validation and applications of
surrogate markers: Little ones with wide shoulders ---------- 150
7.2 Surrogate markers: Some notable failures ---------- 153

PART B: CLINICAL INVESTIGATOR AS A BIOSTATISTICIAN

8. Facts and Figures: Fodder for the Statistician ---------- 158
8.1 Types of data: Another eye-opener ---------- 158
8.2 Summing and summarizing data:
Groupism helps somewhere at least ---------- 160
8.3 Presentation of data: Dressed to be served ---------- 161
8.4 P value: Jump with glee, less than 0.05 is the value of p ------ 170

9. Parametric and Nonparametric Tests:
Normal and not so Normal ---------- 173
9.1 Why create more divisions? ---------- 173
9.2 The tests: Putting them to test ---------- 174
9.3 Meta-analysis: The granddaddy of all clinical research ------ 200

10. Be Wholesome and Avoid Criticism Later ---------- 214
10.1 Confidence interval: Certainty within limits ---------- 214
10.2 Sample size calculation of your study:
To be done not at the end but at the beginning ---------- 217

10.3 Interim analysis:
Break your speed or the speed might break you ---------- 220
10.4 Number needed to treat: Greater common good? ---------- 222

11. Interpreting Statistical Jargon: Clarifying Obscurity ---------- 225
11.1 The devious side of statistics: Concealing and revealing, contradicting and confusing, deceiving and misleading ----- 225

PART C: CLINICAL INVESTIGATOR AS A MANAGER CUM BUSINESSMAN

12. Data (Handling): Not Fragile and Breakable but Handle with Care ---------- 233
12.1 Data management: Company perspectives ---------- 233
12.2 Data handling: Small-scale investigator's perspective -------- 236
12.3 Managing imperfect data: Controversies Galore ---------- 237

13. Portfolio and Project Management: A Colony of Thinking Ants Needed ---------- 242
13.1 Portfolio management in industry: A game of chess ---------- 242
13.2 Project management: Learn from an efficient housewife ----- 245

14. Intellectual Property: Types, Rights and Caveats ---------- 252
14.1 Patents: Protecting your discoveries ---------- 252
14.2 Copyrights: What is in a name? ---------- 264
14.3 Trademarks: Leave your mark ---------- 265

PART D: CLINICAL INVESTIGATOR AS A PHILOSOPHER

15. Ethics of Clinical Research: Think Just and Act Just ---------- 266
15.1 Underlying principles of ethics:
Learn your lessons from history ---------- 266
15.2 Current status of placebos: To use or not to use ---------- 272
15.3 Ethics committees: Angelic guardians or hindering gaggles? 275
15.4 Legal issues of trial related injury: Save yourself first --------- 284
15.5 Some other contemporary ethical concerns ---------- 286

16. Conflicts of Interest: Transparency may Invoke Desires, but is Desirable ---------- 301
16.1 Definition and types of conflicts of interest:
Who has the shares? ---------- 301
16.2 Conflicted dissemination of knowledge:
Where do we go now? ---------- 303
16.3 Conflicts of interest in the higher bodies:
The bigger the better? ---------- 304

PART E: THE END- CLINICAL INVESTIGATOR AS A MORTAL HUMAN

17. Evidence-Based Medicine (EBM): Need of the Day ---------- 308
17.1 Evidence what; I have loads of experience ---------- 308
17.2 What should be trusted: Critical evaluation of literature ----- 313
17.3 Why is EBM important to a clinical investigator? ---------- 322

18. Sending Your Manuscript for Publication: Beginning of the End325
18.1 Choosing appropriate journal for your work: Half the job --- 325
18.2 Paper rejected? Don't lose heart:
Ensuring low rejection rates ---------- 330
18.3 Answering reviewers' queries: Pay attention to details ------ 333

19. Scientific misconduct: Plain carelessness or....? ---------- 335
19.1 Fraud, fabrication, falsification: As old as clinical research -- 335
19.2 Whistle-blowers: Punish, protect or reward ---------- 338
19.3 Plagiarism: More common than you think ---------- 339

PART F: APPENDICES

Appendix I. Table of Contents of a Protocol ---------- 347
Appendix II. Random Number Table ---------- 351
Appendix III. Sample Case Record Form (CRF)
for a Small, Nonfounded, Investigator
Initiated Diabetes Study ---------- 355
Appendix IV. Informed Consent Document Template ---------- 360
Appendix V. Nomogram for Sample Size Calculation ---------- 369
Appendix VI. The Declaration of Helsinki ---------- 372
Appendix VII. The Nuremberg Code (1947) ---------- 377
Appendix VIII. Standard Operating Procedures
of Ethics Committee ---------- 379
Appendix IX. The QUOROM Statement ---------- 386

Index ---------- *389*
