Contents

Section 1
History and Background

1. How MICS was Born? Where are We Now? 3
Arturo Pérez-Arteaga, Luis Felipe Vejarano-Restrepo
- Evolution of Surgical Techniques 3
- Current Terminology 5

2. Forced Infusion 7
Arturo Pérez-Arteaga
- Introduction, History and Background 7
- Preparation, Development and Use of Forced Infusion in Operating Room 10
  - Fluidics 10
  - Definitions 11
  - Creating Forced Infusion 12
  - Anterior Vented Gas Forced Infusion Tubing System of the Accurus Surgical System and Pressurized Infusion Control of the Constellation Surgical System 13
  - Bottle Infusion Tool of the Millennium Microsurgical System 13
  - The Stellaris Surgical System 14
  - External Forced Infusion and Internal Forced Infusion with Other Machines 15

Section 2
Coaxial Microincision Cataract Surgery

3. Coaxial Microincision Phacoemulsification of Cataracts 19
Fernando Aguilera-Zarate
- Advantages of C-MICS (1.6 mm) Surgery 19
  - The Emulsification Power in Microincision is Reduced 19
  - The Holding Force of Fragments in the C-MICS Tip is Lower 19
  - The Aspiration Power of a Microincision Tip is Low 20
  - In C-MICS, Anterior Chamber Stability is Worse than with Wider Phaco Needles 20
- Fluidics and Regulation of Emulsification Energy 20

4. A Low Fluidics Strategy for Micro-Coaxial Torsional Phaco for Dense Cataracts 23
Khiun F Tjia
- Torsional Versus Longitudinal Ultrasound 23
- Torsional Ultrasound and Microincision Cataract Surgery 23
- Fluidics Settings with Torsional Ultrasound in Very Dense Cataract Cases 23
- Dispersive Viscoelastic Protection 24
- Tip Choice for Torsional Ultrasound and Dense Nuclei 24
  - Flared Tip Design and Prolonged Occlusion 24
  - A New Non Flared Tip Design for Micro-coaxial Phaco: 0.9 MiniTip 25
  - Personal Settings Recommendations (Micro-tip/ Tapered Tip and Ultrasleeve) 25

5. Prechopping in Micro-coaxial Phaco 27
Alejandro Cruz-Hernández
- Lens Hardness 27
- Diagram of a Multiple Fracture 28
- Surgical Procedure: Multiple Phacofracture 28
  - Technical Description 28
- Lens Multiple Phacofracture 29

6. Coaxial Microincision Cataract Surgery with Oertli Swiss Technology 32
Francisco Sanchez-Leon
- Is there a Need for Further Downsizing of the Cataract Incision? 32
  - Coaxial Microincision Cataract Surgery Versus Bimanual 35
- Microincision Cataract Surgery through Sub 2 mm Incisions 35
  - Phaco Instrumentation 35
- Sleeve-Armed Coaxial or Sleeveless Biaxial Microphaco—Which Way to Go? 35
- CO-MICS Oertli Technology 38
  - Equipments 38
  - Machine Settings 40
  - CO-MICS with CataRhex®SwissTech 41
  - Occlusion Mode Phaco 42
  - CO-MICS 1.6 mm 42
- Microincision Cataract Surgery 42
  - Irrigation/Aspiration: Safe and Fast Capsule Cleaning 42
  - Proportional Override 42

Section 3
Biaxial Microincision Cataract Surgery

7. Biaxial Microincision Cataract Surgery 47
Mark Packer

8. MICS (Minimally Invasive Cataract Surgery): How to Perform the Transition? Which Instruments should I Use? How to Use the Phaco Machine? 52
Jorge L Alio
- The Continuous Transition of Cataract Surgery 52
- The Transition to Microincision Cataract Surgery 52
  - Incision 52
  - Fluidics 53
  - Power Modulation 53
  - Microincision Cataract Surgery Instruments 54
  - Microincision Cataract Surgery Phacoemulsification Platforms 56
  - MICS Intraocular Lenses 57
- MICS Outcomes 61
  - Astigmatism Control with MICS 61
  - Corneal Aberration with MICS 62
- Clinical Efficacy of MICS 62

9. Safety: MICS versus Coaxial Phaco 66
George HH Beiko
- Core Messages 66
- Visual Outcomes 66
- Incision Damage 67
- Corneal Incision Burn 68
- Corneal Changes 69
  - Clarity 69
  - Induced Corneal Aberrations 69
  - Endothelial Cell Loss 71
- Infection 71
- Summary 73
  - Take Home Messages 73

10. Biaxial Phaco Surgical Tools 75
Luis Felipe Vejarano-Restrepo
- Incision 75
- Viscoelastics 76
- Capsulorhexis 78
- Hydrodissection 79
- Phaco Needles 80
- Irrigation Choppers 81
  - Frontal 81
  - Inferior 83
  - Lateral 83
- Irrigation/Aspiration 84
- Intraocular Lens 84

11. MICS and the Abbott Medical Optics (AMO) Platform 87
George HH Beiko
- AMO WhiteStar Micropulse Technology 87
- AMO Variable WhiteStar 89
- AMO WhiteStar Ice 90
- AMO Chamber Automated Stabilization Environment 91
- AMO WhiteStar Signature 91
- AMO Dual-Pump Technology 92
- AMO Ellips 92
- Personal Technique 93
  - Anesthesia 93
  - Incisions 93
  - Instruments 93
- OVDs 94
  - Typical Case 94
  - Intraocular Lens Choice 95
- Summary of Advantages of AMO Technology 95
- Addendum 97
- PHACO 1 Soft Nuclei 97
  - Unoccluded Settings 97
  - WS Settings 97
  - Pulse Shaping Settings 97
  - Occlusion Mode Settings 97

  - VIT 1 100
  - VIT 2 100
  - DIA 101
  - Thresholds 101
  - Sounds Settings 101

12. MICS with the Infinity Surgical System (Alcon) 102
George HH Beiko
- Introduction to the Alcon Infinity System 103
  - Torsional Ultrasound 103
  - Intelligent Phaco 104
  - Phaco Tip Selection 104
  - Foot Pedal Control 105
- Preparing the Alcon Infiniti Vision System for MICS 106

- Sculpting 106
- Quadrant Removal 107
- Cortex Removal 109
- Epinucleus 109
- Polishing the Capsule 110
- Viscoelastic Removal 110

• Personal Technique 110
- Anesthesia 110
- Incisions 111
- Instruments 111
- Ophthalmic Viscosurgical Devices 112
- Typical Case 112

13. Microphakonit: Cataract Surgery with a 0.7 mm Tip 114
Amar Agarwal

• History 114
• Microphakonit (0.7 mm) Needle Tip 114
• Microphakonit (0.7 mm) Irrigating Chopper 114
• Air Pump and Gas Forced Infusion 115
• Bimanual 0.7 mm Irrigation Aspiration System 116
• Duet Handles 116
• Differences Between 0.9 mm and 0.7 mm Sets in Cataract Surgery 116
• Technique 116
- Incision 116
- Rhexis 116
- Hydrodissection 116
- Microphakonit 117

• Summary 117
- Key Points 117

14. 700 Micron Biaxial Phaco 119
Robert Weinstock

15. TriMICS: A Variation of MICS 124
Jerome Jean-Philippe Bovet

• Abstract 124
• Introduction and Historical Perspectives 124
• Patients and Method 125
- Patient Selection 125
- Presurgery Ocular Examination 125
- Presurgery Treatment 125
- Anesthesia 125
- Surgical Procedure 125

• Discussion 128

Section 4
Personal Techniques for Particular Situations

16. Lens Salute Microphaco 133
Cyres K Mehta, Keiki R Mehta

• Surgical Technique 134

17. Micro-Biaxial Prechop Technique 139
Arturo Pérez-Arteaga

• Introduction 139
• Instrumentation 139
• Surgical Technique 139
- Variations to the Technique 144

18. Hypermature Cataract: Is It Impossible Management with Biaxial? 147
Luis Felipe Vejarano-Restrepo

• Types of Cataracts 147
- Age-Related Cataract 147
- According to Maturity 147
- Classified by Location of Opacity within Lens Structure 147

• Management through Biaxial Technique 148
• Incision 148
• Capsulorhexis 149
- Intumescent Cataracts 149
- Hard Cataract with Reabsorbed Cortex 151

• Hydrodissection 152
• Phacoemulsification 152
- Take Home Pearl 157
- Comment 157

19. Biaxial Microincision Phacoemulsification for Difficult and Challenging Cases 159
I Howard Fine, Jorge L Alió, Richard S Hoffman, Mark Packer

• Core Messages 159
• High Myopia 159
• Posterior Polar Cataract 159
• Posterior Subluxed Cataracts 160
• Mature Cataract with Zonular Dialysis 160
• Punctured Posterior Capsule 161
• Posterior Capsule Rupture 161
• Pseudoexfoliation 161
• Rock-Hard Nuclei 162
• Switching Hands 162
• Microcornea or Microphthalmos 163
• Large Iridodialysis and Zonular Defects 163
• Intraoperative Floppy Iris Syndrome 163
• Every Small Pupil must be Viewed as a Potential Intraoperative Floppy Iris Syndrome 165
• Iris Bombé 165
• Very Shallow Anterior Chambers 166
• Refractive Lens Exchange 166
• Refractive Lens Exchange in Post Radial Keratotomy 167
• Intraocular Cautery 167
• Biaxial Microincision Instruments 168
• Take Home Pearls 169

20. Complications in Phaco; How to Deal with Them 171
Luis Felipe Vejarano-Restrepo

• Problems Constructing the Incision 171
• Incisional Burns 171
• Shallow Anterior Chamber 172
• Lens-Iris Diaphragm Retropulsion Syndrome: Excessive Anterior Chamber Deepening 173
• Detached Descemet Membrane 173
• Capsulorhexis Related Complications 174
• Surge Control 175

- Zonular Problems 177
- Posterior Capsule Rents 178
- Corneal Edema 183

21. Management of Incomplete Capsulorhexis Cases with Biaxial Approach 188
Arturo Pérez-Arteaga
- Avoiding Complications during Biaxial Phaco with an Incomplete Capsulorhexis 188
- Surgical Technique 188

22. Micro-Biaxial Cataract Surgery Combined with 25 Gauge Transconjunctival Sutureless Vitrectomy 197
Arturo Pérez-Arteaga
- Physical Basis 197
- Coaxial Versus Biaxial 198
- Step by Step 198
  - Incisions 199
  - Capsulorhexis 199
  - Hydrodissection 200
  - Phacoemulsification 200
  - Irrigation/Aspiration 201
  - Pars Plana Vitrectomy 201
  - Intraocular Lens Implantation 201
  - Final Steps 201

23. Biaxial: The Best Choice in Pediatric Cataracts 204
Luis Felipe Vejarano-Restrepo
- Surgical Technique 205
  - Biaxial 205
  - Micro-Biaxial 207

24. Micro-Biaxial Posterior Capsule Cleaning 211
Arturo Pérez-Arteaga
- Advantages of Bimanuality 211
- Surgical Technique 212

25. Refractive Lensectomy with 700 Micron System 215
Arturo Pérez-Arteaga
- Lens Features 215
- Advantages 215
- Why in Biaxial and Not in Coaxial 216
- Surgical Technique 216
