Contents

Chapter 1 Overview **1**
- Biomicroscopy 1
- The Slit-lamp Biomicroscope 1
- Forms of Illumination 2

Chapter 2 Parts of the Slit-lamp Biomicroscope **3**
- Illumination System 4
- Observation System 4
- Mechanical Support System 5
- Electrical System 5

Chapter 3 Magnification Ranges and Application **11**
- Low Magnification and its Application 11
- Medium Magnification and its Application 11
- High Magnification and its Application 12

Chapter 4 Filters and Accessories **17**
- Filtered Illumination 17
- Application of Filtered Illumination 17
- Graticule 18

Chapter 5 Instrument Adjustment and Positioning the Patient in the Slit -lamp **19**
- Instrument Focusing 19
- Head Position 20
- Fixation Instructions 21
- Prealignment and Focusing 21

Chapter 6 Illumination Techniques and its Application **22**
- Direct Illumination 22
- Indirect Illumination 38

Chapter 7 Clinical Application **44**
- Fluorescence (Fluorexon) Pattern Observation with Slit-lamp Biomicroscopy in Contact Lens Fitting 44
- Examination of Fundus with the Slit-lamp Biomicroscope 49
- Van Herick's Method for the Estimation of Iridocorneal Angle 53
