CONTENTS

SECTION 1: LABORATORY RULES AND REGULATIONS

Chapter 1: Laboratory Hazards and First Aid 3

- Hazards 3
- Safety Measures 3
- Care while Pipetting 5
- Precautions Regarding Fire Safety 5
- In Case of Accidental Fire 6
- Accidental Swallow of Corrosive Solutions 6
- Inhalation of Corrosive Gases 6
- Burns 6
- Laboratory First Aid 7
- Precautions to be Taken While Handling Chemicals 7
- In Case of Accidents in the Laboratory 9
- Waste Disposal 9

Chapter 2: Laboratory Safety Rules 10

- General Guidelines 10
- Accidents and Injuries 11
- Handling Chemicals 12
- Handling Glassware and Equipment 12
- Heating Substances 12
- After Experiments 12
- Pipetting Techniques 13

Chapter 3: Specimen Collection and Processing 15

- Collection of Blood 16
- Anticoagulants 16
- Collection and Preservation of Urine Specimens 17

Chapter 4: Glasswares Used in Biochemistry Laboratory 19

- Laboratory Glasswares 19
- Pipettes 21
- Test Tubes 23
- Dispensers 24
- Desiccators 24
- Cleaning of Glassware 24

SECTION 2: QUALITATIVE TESTS

Chapter 5: Qualitative Analysis of Carbohydrates 27

- Definition 27
- Classification 27
- Functions of Carbohydrates 29
- Reactions of Carbohydrates 29
- Tests for Carbohydrates 30
- Intensification of Unknown Carbohydrate 44

Chapter 6: Qualitative Analysis of Proteins 45

- Definition 45
- Classification 45
- Functions of Proteins 46
- Reactions of Proteins 46
- Color Reactions for Proteins 57
- Identification of Unknown Protein 70

Chapter 7: Nonprotein Nitrogenous Substances 71

- Urea 71
- Uric Acid 74
- Creatinine 76
- Identification of Unknown Substance of Physiological Importance 78

Chapter 8: Qualitative Analysis of Normal Urine 79

- Examination of Urine 79
- Specimen Collection 79

- Preservation of Urine Samples 80
- General and Physical Characteristics 80
- Chemical Characteristics 82
- Analysis of Normal Urine 83

Chapter 9: Analysis of Abnormal Constituents in Urine 95

- Physical Characteristics in Pathological Conditions 96
- Chemical Constituents 98
- Analysis of Abnormal Urine 98

Chapter 10: Hemoglobin and its Derivatives 111

- Detection of Hemoglobin and its Derivatives 112
- Preparation of Hemoglobin and Derivatives 113
- Preparation of Hemin Crystals 116

Chapter 11: Spot Tests 118

- Phenylketonuria 118
- Homocystinuria 120

SECTION 3: QUANTITATIVE TESTS

Chapter 12: Principles of Colorimetry 125

- Photometry 125
- Colorimeter 126
- Preparation of Solution for Investigation 127
- Technique 128
- Relationship between Absorbance and Transmittance 131
- Selection of Filter in Colorimetric Estimation 131
- Calculations 132
- Application of Colorimeter 132

Chapter 13: Estimation of Blood Sugar 133

- Glucose Oxidase Method 138
- Reagents 138
- Procedure 138

Chapter 14: Estimation of Blood Urea 140
Chapter 15: Estimation of Urine Creatinine 144
Chapter 16: Estimation of Serum Inorganic Phosphate 149
Chapter 17: Estimation of Serum Total Proteins 154

SECTION 4: DEMONSTRATION PRACTICALS

Chapter 18: Chromatography 163
- Classification 164

Chapter 19: Electrophoresis 169
Chapter 20: Glucose Tolerance Test 175
Chapter 21: Estimation of Serum Aspartate Aminotransferase and Alanine Aminotransferase 182
Chapter 22: Estimation of Serum Cholesterol 186
Chapter 23: Estimation of Plasma Ascorbic Acid 188
Chapter 24: Flame Photometer 190
Chapter 25: Cerebrospinal Fluid Analysis 193
Chapter 26: Estimation of Albumin in Urine 197

APPENDICES

- Case Reports 201
- Spotters 229
- Objective Structured Practical Examination 244
- Quality Control 252
- Miscellaneous 262
- Normal Values (Reference Values) 268
- Scheme of Examination 272
