Contents

Chapter 1. Benign Mucosal White Lesions **1**

Diagnostic Approaches to Mucosal White Lesions: Some basic facts

- **Case 1A:** An adult male reports for a routine dental check-up. Examination reveals a linear white lesion on the buccal mucosa *10*
- **Case 1B:** An adult male complains of a rough white patch on the left buccal mucosa *10*
- **Case 1C:** A young adult male seeks routine dental consultation. Examination reveals a white patch on the left buccal mucosa *11*
- **Case 2:** An adult male reports for a routine dental examination. Examination reveals a cloudy gray colored buccal mucosa *13*
- **Case 3:** An adult male attends an oral cancer screening program. Examination reveals multiple granular white lesions on the right and left buccal mucosae *15*
- **Case 4A:** A middle-aged male reports for routine dental examination. Examination reveals a thick raised white patch involving the hard palate *17*
- **Case 4B:** A 55-year-old male presents with white patch involving the hard palate *18*
- **Case 5:** A young adult male reports for a routine dental examination. Examination reveals corrugated white patches on the lateral surfaces of the tongue *20*
- **Case 6:** An elderly male complains of sore mouth and multiple white patches in the mouth *23*
- **Case 7:** A middle-aged male complains of a white 'wart-like' growth on the hard palate *26*

Chapter 2. Benign Mucosal Red Lesions **29**

Diagnostic Approaches to Mucosal Red Lesions: Some basic facts

- **Case 1:** An elderly male presents for a routine dental check-up. Oral examination reveals multiple red spots on the tongue and lips *35*
- **Case 2:** A 50-year-old female presents with a raised red lesion on the mucosa of the lower lip *37*
- **Case 3:** A 49-year-old female complains of sore red gums *40*
- **Case 4A:** A young boy is brought to the oral medicine clinic with a history of painful oral ulcers *44*

- **Case 4B:** An adult male complains of painful red patches in the mouth and lips *45*
- **Case 5A:** An elderly denture wearer male complains of discomfort and mild burning sensation on the palate *48*
- **Case 5B:** An elderly male complains of ill-fitting maxillary complete denture *49*
- **Case 5C:** A 46-year-old female complains of redness of the mucosal surface covered by the partial denture *49*
- **Case 6:** A young male complains of red margins of the gums *53*
- **Case 7A:** A middle-aged male complains of mild burning sensation on the tongue *55*
- **Case 7B:** A middle-aged male complains of persistent bad breath *56*
- **Case 7C:** A 50-year-old male complains of sensitivity to spicy food on the dorsum of the tongue *56*
- **Case 8:** A middle-aged Indian male complains of a painful red patch on the palate *59*
- **Case 9A:** A young female complains of mild burning sensation on the tongue *61*
- **Case 9B:** A middle-aged male complains of alterations in taste *62*
- **Case 10:** An elderly male complains of painful angles of the mouth *64*

Chapter 3. Mucosal White and Red Lesions and Disorders with Malignant Potential 68

Diagnostic Approaches to Potentially Malignant Mucosal White and Red Lesions and Disorders: Some basic facts

- **Case 1A:** A middle-aged male complains of a white patch on the left buccal mucosa *77*
- **Case 1B:** A 58-year-old male complains of a mixed white and red patch on the right commissure *77*
- **Case 1C:** A middle-aged male complains of a white patch on the hard palate *78*
- **Case 2:** An elderly male reports for repair of a lower partial denture. Examination reveals a white patch in the floor of the mouth *90*
- **Case 3:** A 48-year-old male reports for a routine dental examination. Oral examination reveals a white lesion involving the entire lower labial sulcus *94*
- **Case 4A:** A middle-aged female complains of sore buccal mucosa *98*
- **Case 4B:** A 51-year-old male complains of bilateral white lesions on the buccal mucosae *98*
- **Case 4C:** A middle-aged female complains of sore mouth *99*
- **Case 5:** An elderly male reports with a history of scaly red lesions on the lower lip *104*

- **Case 6:** A 60-year-old male presents with mixed white and red patches at the commissures *107*
- **Case 7A:** A middle-aged male complains of stiffness of the cheek mucosa *112*
- **Case 7B:** An elderly female complains of restricted mouth opening *112*
- **Case 8:** A 49-year-old male complains of a red patch on the hard palate *117*
- **Case 9:** A 47-year-old male with a history of lupus erythematosus complains of a sore red patch on the left cheek mucosa *120*
- **Case 10:** A young female complains of a white patch on the left cheek mucosa following restorative dental procedures carried out a few days previously *124*

Chapter 4. Benign Mucosal Pigmented Lesions and Disorders 131

Diagnostic Approaches to Mucosal Pigmented Lesions: Some basic facts

- **Case 1A:** A young male complains of black patch on the tongue and altered taste *138*
- **Case 1B:** An elderly male complains of brown patch on the tongue *138*
- **Case 2:** A young male presents with multiple pigmented lesions on the vermillion and around the lips *140*
- **Case 3:** A young male of African descent reports for treatment on his maxillary anterior teeth. Examination reveals dark brown patches on the alveolar mucosa and gums *142*
- **Case 4A:** A young male reports for a routine dental check-up. Examination reveals a pigmented lesion on the soft tissues around the crown of the mandibular first molar *144*
- **Case 4B:** An adult male reports for a routine dental examination. Examination reveals a pigmented lesion on the edentulous lower alveolar ridge *144*
- **Case 5:** A young female reports for a routine dental check-up. Examination reveals a raised pigmented lesion on the lower lip *147*
- **Case 6:** A 35-year-old male reports for a routine dental examination. Oral examination reveals a flat pigmented lesion on the lower lip *149*
- **Case 7:** A young male with a history of HIV disease presents for routine oral examination. Examination reveals pigmentation of the buccal mucosa *151*

Chapter 5. Benign Mucosal Blisters, Erosions, and Ulcers 154

Diagnostic Approaches to Blisters, Erosions and Ulcers: Some basic facts

- **Case 1A and B:** A 53-year-old female complains of blisters and sore mouth *164*

- **Case 2:** A 41-year-old male complains of multiple painful ulcers in the mouth *168*
- **Case 3A:** A 13-year-old girl complains of painful ulcers in mouth and lips *172*
- **Case 3B:** A 11-year-old girl complains of painful ulcers on the tongue and gums *173*
- **Case 4:** A 30-year-old female complains of painful blisters on the lower lip *176*
- **Case 5:** An elderly male complains of blood-filled blisters on the palate *178*
- **Case 6:** A 29-year-old female complains of ulcers on the soft palate *180*
- **Case 7A:** A 57-year-old male complains of blisters on the right side of the face, upper lip and the mouth *183*
- **Case 7B:** An adult male complains of painful ulcers on the right side of the tongue and cheek mucosa *183*
- **Case 8:** A 45-year-old male complains of gingival ulcers and oral malodor *187*
- **Case 9A:** A 20-year-old male complains of sore palate *190*
- **Case 9B:** A 45-year-old HIV-positive male complains of a large painful ulcer on the palate *191*
- **Case 9C:** A 38-year-old female complains of painful ulcers on the buccal mucosa *191*
- **Case 10:** An adult male presents with a painless ulcer on the tongue *196*
- **Case 11:** A middle-aged male complains of an ulcer on the right lateral surface of the tongue *198*
- **Case 12:** A 30-year-old male presents with an ulcer at the tip of the tongue *201*

Chapter 6. Benign Mucosal Swellings 205

Diagnostic Approaches to Mucosal Swellings: Some basic facts

- **Case 1A:** A young female presents with a swelling on the gums between maxillary central incisors *210*
- **Case 1B:** A young male complains of a fleshy growth on the anterior part of the palate *210*
- **Case 1C:** A young adult female complains of a swelling on the buccal aspect of the gingiva in relation to the right mandibular second premolar *211*
- **Case 2:** An elderly edentulous denture wearer reports with a history of a lump in the left mandibular vestibule *216*

- **Case 3A:** A middle-aged male on cyclosporin therapy presents with gingival enlargement *218*
- **Case 3B:** A young male presents with mandibular gingival swelling *219*
- **Case 3C:** A young male complains of bleeding from the swollen gingiva *219*
- **Case 4:** A 10-year-old boy is brought to the clinic with a complaint of a persistent swelling of the lower lip and painful cracks at the angle of the mouth *226*
- **Case 5A:** A 21-year-old male presents with a painless soft swelling on the lower lip *230*
- **Case 5B:** A 17-year-old boy complains of a fluctuant swelling on the labial mucosa *230*
- **Case 5C:** A 19-year-old male presents with a swelling on the floor of the mouth *231*
- **Case 6:** A 55-year-old male presents with a painless swelling in the palate *234*
- **Case 7A:** An adult male presents with a painless growth on the cheek mucosa *236*
- **Case 7B:** A 24-year-old male presents with a soft swelling on the dorsum of the tongue *239*

Chapter 7. Oral Cancer (Squamous Cell Carcinoma) and Other Malignancies 243

Diagnostic Approaches to Oral Cancer: Some basic facts

- **Case 1A:** A 58-year-old male reports with a history of a growth on the right buccal mucosa and the labial commissure *244*
- **Case 1B:** A 56-year-old male presents with a history of a white lesion and pain on the left buccal mucosa *244*
- **Case 1C:** An elderly male reports with a history of a painful ulcer on the left buccal mucosa *245*
- **Case 1D:** A middle-aged male presents with a growth on the right border of the tongue *245*
- **Case 1E:** A middle-aged male complains of a white plaque and a growth on the left border of the tongue *246*
- **Case 1F:** A middle-aged male reports with a fungating growth on the left ventral surface of the tongue *246*
- **Case 1G:** An elderly male presents with a swelling in the right submandibular region. Patient also reports of an intraoral growth on the same side *247*
- **Case 2A:** A 57-year-old male complains of a growth involving the left buccal mucosa *257*

- **Case 2B:** A middle-aged male complains of a large growth involving the right side of the tongue *258*
- **Case 3A:** A 51-year-old male presents with a large bluish/black growth on the lower anterior gingivae and the floor of the mouth *261*
- **Case 3B:** A 48-year-old male presents with a blue colored growth on the palate *262*
- **Case 4:** A 42-year-old male complains of a fleshy growth on the palate *265*

Chapter 8. Dental and Orofacial Pain 269

How to Record Pain History

- **Case 1:** An adult male reports with moderate to severe pain in a carious left mandibular molar. Examination points to a diagnosis of acute pulpitis *271*
- **Case 2:** A 57-year-old female complains of severe stabbing intermittent pain on the right side of the face. On examination of the teeth and oral structures no abnormality is detected *274*
- **Case 3:** A female aged 59 years complains of oral mucosal burning sensation of several months duration *278*
- **Case 4:** A female aged 41 years complains of severe facial pain on the left side of the maxilla *281*

Chapter 9. Miscellaneous Disorders 285

- **Case 1A:** A 36-year-old male complains of mild pain and swelling of the left side of the face *286*
- **Case 1B:** A 33-year-old female complains of acute pain and swelling of the left side of the face *286*
- **Case 2:** A young adult complains of inability to move facial muscles on one side and taste alterations *294*
- **Case 3:** A middle-aged male complains of bilateral facial swelling and dry mouth *298*
- **Case 4:** An elderly male complains of severe pain and ulceration in the mouth following radiation therapy for head and neck cancer *305*
- **Case 5A:** A middle-aged male with a history of radiation therapy for oral cancer complains of bone exposure in the lower jaw *309*
- **Case 5B:** An elderly male on medication for osteoporosis complains of bone exposure in the lower jaw *310*

Appendices

1. ***Clinical and histological nomenclature used in oral medicine 319***
2. ***Definitions of mucosal lesions/disorders 323***

3. Clinical differential diagnosis of mucosal lesions and disorders 330
Table A3.1: Clinical differential diagnosis of mucosal benign white lesions 330
Table A3.2: Clinical differential diagnosis of mucosal benign red lesions 335
Table A3.3: Clinical differential diagnosis of mucosal white and red lesions or disorders with malignant potential 340
Table A3.4: Clinical differential diagnosis of mucosal pigmented lesions and disorders 348
Table A3.5: Clinical differential diagnosis of mucosal blisters, erosions and ulcers 355
Table A3.6: Clinical differential diagnosis of mucosal and other oral soft tissue swellings 365
Table A3.7: Clinical differential diagnosis of oral cancer (squamous cell carcinoma) and other less common malignant disorders 374
Table A3.8: Clinical differential diagnosis of dental and orofacial pain disorders 378
