Contents

1. Cell Physiology and Biophysics 1
- Cell membrane 1
- Cell organelles 2
- Intercellular connections 4
- Transport mechanisms 5
- Chemical messengers 11
- Ion channels in the cell membrane 14

2. Nerve 19
- Nerve biophysics 19
- Nerve conduction 27
- Nerve fiber types 28
- Structure of neuron 30
- Degeneration and regeneration in peripheral nerve fibers 31

3. Muscle 36
- Skeletal muscle 36
- Molecular events during muscular contraction 39
- Mechanics of muscle contraction 41
- Energy mechanism during muscle contraction 43
- Motor unit 44
- Neuromuscular transmission 45
- Cardiac muscle 48
- Smooth muscle 49

4. Central Nervous System 56
- Introduction 56
- Synaptic transmission 56
- Neurotransmitters 62
- Sensory system 66
- Sensory receptors 66
- Sensory pathways 71
- Physiology of pain 73
- Somatotopic organization 76
- Motor organization and control 77
- Motor organization at the spinal level 77
- Motor organization in the brainstem 83
- Motor control from basal ganglia 84
- Motor control from cerebellum 87
- Motor cortex 91

Spinal cord lesions 94
Postural reflexes 95
Thalamus 101
Reticular formation 103
Electroencephalogram 104
Sleep 105
Hypothalamus 106
Limbic system 109
Cerebral cortex 110
Higher functions of cortex 116
Cerebrospinal fluid 119
Autonomic nervous system 121

5. Special Senses 125
Vision 125
Hearing 138
Chemical senses 145

6. Blood 157
Plasma 157
Erythrocytes 158
Leucocytes 162
Thrombocytes 167
Hemostasis 169
Blood groups and transfusion 174
Immunity 177
Hemoglobin 182
Anemias 183

7. Cardiovascular System 190
Organization 190
Cardiac muscle 194
Cardiac impulse 197
Electrocardiogram 198
Cardiac cycle 203
Heart sounds 206
Cardiac output 207
Regulation of heart and blood vessels 211
Arterial pulse 219
Venous pressure 220
Regional circulation 222
Coronary circulation 223
Cerebral circulation 225
Cutaneous circulation 225
Capillary circulation 226

Lymphatic circulation 227
Fetal circulation 228
Cardiovascular changes in muscular exercise 229
Circulatory shock 231
Cardiac failure 234
Gravity induced changes in CVS 234

8. Respiratory Physiology 240
Functional anatomy of respiratory system 240
Mechanics of respiration 241
Dead space 245
Alveolar ventilation 246
Pulmonary circulation 246
Diffusion of gases 248
Transport of respiratory gases 250
Regulation of respiration 255
Hypoxia 259
Respiratory disorders 260
Artificial respiration and lung function tests 263

9. Renal Physiology 270
Nephron 270
Renal blood flow 272
Glomerular filtration 274
Tubular function 277
Urine concentration 281
Regulation of body water balance 285
Regulation of sodium balance 288
Acid base balance 292
Juxtaglomerular apparatus 296
Micturition 296
Tests to assess renal function 298

10. Skin and Body Temperature 303
Skin 303
Body temperature regulation 304

11. Gastrointestinal System 308
Introduction, organization of digestive tract 308
Digestive secretions 309
Gastrointestinal hormones 319
Liver functions 322
GI motility 324
Digestion and absorption of food 331
Energy balance 334

12. Endocrine System 339
General considerations 339
Anterior pituitary 344
Posterior pituitary 351
Thyroid gland 355
Adrenal gland 361
Hormonal regulation of calcium and phosphorus metabolism 372
Endocrine function of pancreas 378
Reproductive system 384
Development of gonads and genitalia 384
Testis 386
Ovary 391
Placenta 401
Physiological changes during pregnancy 403
Parturition 405
Lactation 405
Contraception 406

Index *413*
