CONTENTS

1. Introduction 1
- ¤ Basic Principles 1
- ¤ Basic Electrophysiology 1
- ¤ Normal Sequence of Cardiac Depolarization and Repolarization 2
- ¤ ECG Registration—Types of Leads 4
  - – Bipolar Limb Leads or Standard Leads 4
  - – Unipolar Leads 5

2. The Normal Electrocardiogram 9
- ¤ Normal Electrocardiographic Complex 9
- ¤ Normal Patterns and Variations of the Electrocardiogram 11
- ¤ Electrocardiographic Position of the Heart 13
  - – Rotation on Anteroposterior Axis 13
  - – Rotation on Longitudinal Axis 14

3. Method of Analysis of the Electrocardiogram 15
- ¤ Rate 16
- ¤ Rhythm 18
  - – Sinus Rhythm 18
  - – Atrial Rhythms 20
  - – Junctional (Nodal) Rhythm 24
  - – Ventricular Rhythms 25
  - – Atrioventricular Conduction Variations 27
  - – Unusual Complexes or Beats 30
- ¤ Voltage 34
- ¤ Electrical Axis 35
  - – Procedure for Determining the Electrical Axis 36
- ¤ P Wave Abnormalities 39
  - – Duration and Amplitude: Chamber Enlargement 39
  - – Absent (Unidentifiable) P waves 40
  - – Inverted P Waves 41
  - – Changing Shape 43
- ¤ PR Interval Abnormalities 43
  - – Prolonged 43
  - – Shortened 43
  - – Varying 43

- ¤ Q Wave Abnormalities 44
  - – Pathological Q Wave 44
- ¤ QRS Complex Abnormalities 44
  - – Duration and Amplitude 44
- ¤ ST Segment Abnormalities 54
  - – Depressed 54
  - – Elevated 55
- ¤ T Wave Abnormalities 60
  - – Increased Amplitude 60
  - – Low or Flat 61
  - – Inverted 61
- ¤ QT Interval Abnormalities 62
  - – Prolonged 62
  - – Shortened 62
- ¤ U Wave Abnormalities 63
- ¤ J wave 63

4. Ischemic Heart Disease 65

- ¤ Myocardial Infarction 65
  - – ECG Changes in ST Segment Elevation MI 65
  - – ECG Changes in Non-ST Segment Elevation MI 69
- ¤ Myocardial Ischemia without infarction 72
  - – ECG at Rest 72
  - – ECG During Anginal Attack 72
  - – No Pain 73
  - – Chest Pain 73
  - – Prinzmetal's (Variant) Angina 73
  - – The Brugada Syndrome 74
