CONTENTS

SECTION ONE: CELL BIOLOGY

1. **Cell and Cell Organelles: Chemistry and Functions** 3
   - Types of Cells *3*
   - Mitochondrial Membranes *5*
2. **Biological Membranes: Structure and Function** 10
   - Chemical Composition of the Membranes *10*
   - Functions: Transport System *15*

SECTION TWO: CHEMISTRY OF BIOMOLECULES

3. **Chemistry of Carbohydrates** 23
   - Carbohydrates *23*
   - Classification *23*
   - Cyclic Structures *25*
   - Mutarotation *25*
   - Monosaccharides *26*
   - Important Properties of Monosaccharides *28*
   - Other Sugar Derivatives of Biomedical Importance *31*
   - Disaccharides *33*
   - Oligosaccharides *35*
   - Polysaccharides *35*
   - Heteropolysaccharides (Heteroglycans)
   - Mucopolysaccharides (MPS) *37*
   - Proteoglycans—Chemistry and Functions *40*
4. **Chemistry of Lipids** 45
   - Lipids *45*
   - Classification of Lipids *46*
   - Derived Lipids *46*
   - Essential Fatty Acids *48*
   - Alcohols *49*
   - Cholesterol *50*
   - Other Sterols of Biological Importance *52*
   - Simple Lipids *52*
   - Identification of Fats and Oils *54*
   - Compound Lipids *55*
   - Glycolipids *59*
5. **Prostaglandins—Chemistry and Functions** 66
   - Prostaglandins *66*
   - Metabolism of Prostaglandins *67*
   - Functions of Prostaglandins *70*
   - Chemistry and Functions of Prostacyclins and Thromboxanes *71*
   - Leucotrienes-LTs *72*
   - Lipoxins *74*
6. **Chemistry of Proteins and Amino Acids** 76
   - Amino Acids *77*
   - Proteins *83*
   - General Properties of Proteins *86*
   - Structural Organisation of Proteins *89*
   - Denaturation of Proteins *92*
   - Aminoacidurias *94*
7. **Plasma Proteins—Chemistry and Functions** 97
   - Plasma Proteins *97*
   - Characteristics of Individual Plasma Proteins *98*
   - Other Proteins of Clinical Interest *103*
   - Functions of Plasma Proteins *105*
   - Genetic Deficiencies of Plasma Proteins *107*
   - Proteinuria *107*
8. **Immunoglobulins—Chemistry and Functions** 110
   - Properties of Individual Immunoglobulins *111*
   - Structure and Chemistry of Immunoglobulins—Model of Ig Molecule *115*
   - Polyclonal Vs Monoclonal Antibody: Hybridoma *118*
9. **Chemistry of Enzymes** 121
   - Nomenclature and Classification of Enzymes *123*
   - Specificity of Enzymes *123*
   - Mechanism of Enzyme Action *124*
   - Models of Enzyme-substrate Complex Formation *124*
   - Kinetic Properties of Enzymes *125*
   - Factors Affecting Enzyme Action *126*
   - Enzyme Inhibition *127*
10. **Biological Oxidation** 135
    - Redox Potential and Free Energy *138*
    - Mitochondrial Electron Transport Chain *138*
    - Detail Structure and Functions of Electron Transport Chain (ETC) *139*
    - Inhibitors of Electron Transport Chain *143*
    - Oxidative Phosphorylation *143*
    - Uncouplers of Oxidative Phosphorylation *145*
11. **Chemistry of Haemoglobin and Haemoglobinopathies** 149
    - Haemoglobin *150*
    - Structure of Hb *150*
    - Varieties of Normal Human Haemoglobin *151*
    - Derivatives of Haemoglobin *152*
    - Combination of Haemoglobin with Gases *155*
    - Abnormal Haemoglobins and Haemoglobinopathies *157*
    - Abnormal Haemoglobins *157*

- Haemoglobinopathies *157*
- Abnormal Haemoglobins Which Produce Methaemoglobinemia *159*
- Abnormal Haemoglobins Associated with High O_2-affinity *159*
- Abnormal Hb which Interferes with m-RNA Formation *159*
- Thalassaemias *159*

12. Vitamins 162
- Fat-soluble Vitamins *163*
- Functions of Vitamin A *164*
- Vitamin D *167*
- Functions of Vitamin D *169*
- Vitamin E (Tocopherols) *171*
- Functions of Vitamin E *171*
- Functions of Vitamin K *173*
- Water-soluble Vitamins *174*
- Metabolic Role and Functions *175*
- B-complex Vitamins *177*
- Riboflavin (Vitamin B_2) *179*
- Niacin (Vitamin B_3) *181*
- Pyridoxine (Vitamin B_6) *184*
- Lipoic Acid (Thioctic Acid) *186*
- Pantothenic Acid (Vitamin B_5) *187*
- Biotin (Vitamin B_7) *189*
- Folic Acid Groups (Vitamin B_9) *191*
- Vitamin B_{12} (Cyanocobalamine) *196*
- Inositol *200*

13. Chemistry of Respiration and Free Radicals 204
- Transport of Oxygen *205*
- Clinical Importance of Oxygen *206*
- Transport of Carbon Dioxide *207*
- Free Radicals *209*

SECTION THREE: MOLECULAR BIOLOGY

14. Chemistry of Nucleotides 215
- Nucleoproteins *215*
- Nucleosides *218*
- Nucleotides *218*
- Nucleotides and Nucleosides of Biological Importance *220*
- Cyclic Nucleotides *222*

15. Metabolism of Purines and Pyrimidines 226
- Catabolism of Pyrimidines *228*
- Metabolism of Purines *229*
- Salvage Pathways for Purine and Pyrimidine Bases *232*
- Catabolism of Purines *233*
- Uric Acid Metabolism and Clinical Disorders of Purine and Pyrimidine Metabolism *234*

16. Chemistry of Nucleic Acids, DNA Replication and DNA Repair 239
- Nucleic Acids *239*
- Junk DNA *243*
- Ribonucleic Acid (RNA) *244*
- Small RNAs *246*
- Types *246*
- Replication of DNA *250*
- Replication and its Importance *250*
- DNA Repair Mechanisms *257*

17. Protein Synthesis, Gene Expression and Recombinant DNA 259
- Transcription *260*
- Genetic Code *263*
- Translation of m-RNA (Protein Synthesis) *264*
- Chaperones: Proteins that Prevent Faulty Folding *269*
- Gene Expression and Regulation *271*
- Mutation *276*
- Recombinant DNA Technology *279*

18. Polymerase Chain Reaction (PCR) and Real-Time PCR 287
- Various Types of PCR *288*
- Advantages of Real-time PCR *289*
- Real-time Reporters *289*
- SYBR® Green *290*
- Real-time Reporters for Multiplex PCR *290*
- Investing in the Real-time Technique *291*
- Viral Quantitation *291*
- Limitations of Real-time PCR *291*

19. Human Genome Project 293
- Announcement of Draft Sequence of Human Genome *293*
- Approaches of Genome Sequencing by Two Groups *294*
- Genome Mapping *294*
- Benefits of the Project *295*
- Project Goals and Completion Dates *296*
- Additional Benefits *296*
- The Next Step: Functional Genomics *297*

20. Gene Therapy 298
- Diseases of Genetic Origin *298*
- Altered Genes *299*
- What is Gene Therapy? *299*
- How Does Gene Therapy Work? *300*
- Methods of Inserting Genetic Material into Human Chromosomes *300*
- Gene Transfer Vehicle *301*
- Viral Vectors for Gene Therapy *301*
- Non-Viral Vectors: Liposomes *302*
- Gene Therapy for Haematopoietic Derived Diseases *302*
- Gene Silencing *303*
- RNA Interference *303*
- Antisense *304*
- siRNA as Antiviral Agent *304*
- Germline Gene Therapy *305*
- What is the Current Status of Gene Therapy Research? *306*

- What Factors have kept Gene Therapy from Becoming an Effective Treatment for Genetic Disease? *306*
- What are Some of the Ethical Considerations for using Gene Therapy? *307*
- Future Gene Therapy *307*
- New Approaches to Gene Therapy *308*
- How to Deal with a Dominant Negative? *308*
- Use of Ribozymes Technology *309*

21. Biochemistry of Cholera—Vibrio Toxins, Pathogenesis 310
- Cholera *310*
- History and Spread of Epidemic Cholera *311*
- Antigenic Variation and LPS Structure in *Vibrio cholerae* *312*
- Antigenic Determinants of *Vibrio cholerae* *312*
- Cholera Toxin *312*
- Structure of Cholera Toxin *312*
- Enzymatic Reaction *313*
- Chemistry of Colonisation of the Small Intestine *313*
- Genetic Organisation and Regulation of Virulence Factors in *Vibrio cholerae* *314*
- Pathogenesis *314*

SECTION FOUR: METABOLISM

22. Digestion and Absorption of Carbohydrates 319
- Digestion of Carbohydrates *320*
- Absorption of Carbohydrates *320*
- Defects in Digestion and Absorption of Carbohydrates (Including Inherited Disorders) *323*

23. Metabolism of Carbohydrates 325
- Glycolysis *327*
- Energy Yield Per Glucose Molecule Oxidation *331*
- Peculiarities of Glucose Oxidation by RB Cells and Rapoport-Luebering Shunt *333*
- Formation and Fate of Pyruvic Acid *334*
- Citric Acid Cycle *336*
- TCA Cycle is Called Amphibolic in Nature—Why? *341*
- Pasteur Effect *343*
- Shuttle Systems *343*
- Metabolism of Glycogen *346*
- Glycogenesis *347*
- Glycogenolysis *349*
- Hexose Monophosphate (HMP) Shunt *354*
- Metabolic Significance of HMP Shunt *358*
- Uronic Acid Pathway *360*
- Clinical Importance of Uronic Acid Pathway *362*
- Functions of Glucuronic Acid *363*
- Gluconeogenesis *363*
- Metabolic Pathways Involved in Gluconeogenesis *364*
- Regulation of Gluconeogenesis *368*
- Fates of Lactic Acid in the Body *369*
- Metabolism of Galactose *369*
- Metabolism of Fructose *372*
- Regulation of Blood Glucose (Homeostasis) *374*
- Blood Sugar Level and its Clinical Significance *377*
- Glycosuria *377*
- Diabetes Mellitus *379*
- Glucose Tolerance Test (GTT) *384*

24. Digestion and Absorption of Lipids 391
- Digestion of Lipids *392*
- Absorption of Lipids *394*

25. Metabolism of Lipids 398
- Plasma Lipids *399*
- Fatty Acid Synthesis *414*
- Metabolism of Acyl Glycerols and Sphingolipids *419*
- Biosynthesis of Phospholipids *420*
- Ketosis *425*
- Ketone Body Formation in Liver (Ketogenesis) *425*
- Metabolism of Cholesterol *431*
- Consideration of Other Factors that Influence Cholesterol Level in Blood *435*
- Fate of Cholesterol *437*
- Bile Acid *438*
- Pathological Variations of Serum Cholesterol *440*
- Relation of Cholesterol and Other Lipids as Risk Factor in Coronary Heart Disease (CHD) *441*
- Formation and Fate of "Active" Acetate (Acetyl-CoA) (Two Carbon Metabolism) *441*
- Plasma Lipoproteins and Metabolism *443*
- Types of Apoproteins Present in Various Lipoprotein Fractions (Chemistry of Apoproteins) *445*
- Atherosclerosis *453*
- Plasma Lipoproteins and Atherosclerosis *455*
- Fatty Liver *457*
- Types of Fatty Liver *457*
- Biochemical Mechanisms of Some Agents *459*

26. Digestion and Absorption of Proteins 463
- Digestion of Proteins *463*
- Digestion in Small Intestine *466*
- Absorption of Amino Acids *467*

27. Metabolism of Proteins and Amino Acids 470
- Amino Acid Pool *471*
- Nitrogen Balance *472*
- Essential Amino Acids *472*
- Dissimilation of Amino Acids (N-catabolism of Amino Acids) *473*
- Transamination *474*
- Deamination *475*
- Transdeamination (Deamination of L-glutamic Acid) *477*
- NH_3 Transport *477*
- Urea Formation (Krebs-Henseleit Cycle) *479*
- Clinical Significance of Urea *481*
- Glucose-alanine Cycle *483*
- Fate of Carbamoyl-P *483*
- Glutamine Formation and Functions *483*
- Functions of Glutamine *485*
- Decarboxylation Reaction and Biogenic Amines *490*
- Gaba Shunt *493*

- Polyamine Synthesis Inhibitor *495*
- Metabolism of Individual Amino Acids *495*
- Metabolic Role of Methionine *505*
- Glutathione—Chemistry and Functions *509*
- Metabolism of Other Amino Acids *511*
- Serine *513*
- Histidine *514*
- β-alanine *515*
- Tryptophan *516*
- Serotonin *519*
- Melatonin *520*
- Role of Nitric Oxide *520*
- Metabolism of Creatine *525*

28. Integration of Metabolism of Carbohydrates, Lipids and Proteins 531
- Interconversion Between the three Principal Components *533*

29. Metabolism in Starvation 535
- Experimental Observations *535*
- Effects on Metabolism *536*
- Carbohydrate Metabolism *536*
- Lipid Metabolism *536*
- Protein Metabolism *538*
- Water and Mineral Metabolism *538*

30. Porphyrins and Porphyrias (Synthesis of Haem) 540
- Porphyrins *540*
- Biosynthesis of Porphyrins *541*
- Regulatory Influences and Effects of Inhibitors *543*
- Synthesis of Haemoglobin *544*

31. Haem Catabolism 548
- Sources of Bilirubin *549*
- Transport of Bilirubin *550*
- Conjugation of Bilirubin with D-glucuronic Acid in Liver Cells *551*
- Secretion of Bilirubin in the Bile *551*
- Excretion of Bile Pigments *553*

32. Detoxication 555
- What is Detoxication? *555*
- Mechanism of Detoxication *556*

33. Hormones—Chemistry, Mechanism of Action and Metabolic Role 562
- Hormones *563*
- Mechanism of Action of Hormones *564*
- Regulation of Hormone Secretion *566*
- Pituitary Hormones *566*
- Hormones of the Anterior Pituitary *567*
- Growth Hormone (Somatotropin) *567*
- Pituitary Tropic Hormones *568*
- Hormone of Middle Lobe of Pituitary *570*
- Hormones of Posterior Pituitary Lobe *570*
- Thyroid Gland and its Hormones *571*
- Thyroid Hormones *571*
- Mechanism of Action of Thyroid Hormones *575*
- Metabolic Role of Thyroid Hormones *576*
- Parathyroid Glands and Their Hormones *578*
- Parathormone (PTH) *578*
- Calcitonin *580*
- Insulin *581*
- Mechanism of Action of Insulin *583*
- Metabolic Role of Insulin *584*
- Glucagon Hyperglycaemic-glycogenolytic Factor (HGF) *587*
- Somatostatin *588*
- Adrenal Steroid Hormones *589*
- Glucocorticoids *590*
- Mechanism of Action *591*
- Metabolic Role of Glucocorticoids *592*
- Mineralo-corticoids *594*
- Metabolic Role of Aldosterone *595*
- Renin-angiotensin System *596*
- Adrenal Medullary Hormones *597*
- Metabolic Role of Catecholamines *598*
- Gonadal Hormones *599*
- Androgens *599*
- Metabolic Role *601*
- Female Sex Hormones *601*
- Estrogens *601*
- Metabolic Role *603*
- Progestational Hormones: (Luteal Hormones) *603*
- Metabolic Role *604*
- Relaxin *604*
- Placental Hormones *604*

34. Metabolism of Minerals and Trace Elements 608
- Sodium *608*
- Sodium Pump *609*
- Potassium *610*
- Chlorine *612*
- Calcium *612*
- Phosphorus *615*
- Sulphur *615*
- Iron *616*
- Copper *622*
- Magnesium *624*
- Fluorine *625*
- Zinc *626*
- Manganese *628*
- Chromium *628*
- Nickel *629*
- Cobalt *629*
- Molybdenum *630*
- Selenium *630*

SECTION FIVE: CLINICAL BIOCHEMISTRY

35. Enzymes and Isoenzymes of Clinical Importance 637
- Enzymes *637*
- Clinical Significance of Enzyme Assays *639*
- Serum Enzymes in Heart Diseases *639*

- Serum Enzymes in Liver Diseases *642*
- Serum Enzymes in GI Tract Diseases *642*
- Serum Enzymes in Muscle Diseases *643*
- Serum Enzymes in Bone Diseases *643*
- Value of Enzymes in Malignancies *643*
- Isoenzymes *644*

36. Renal Function Tests **650**
- Renal Function Tests *651*
- Glomerular Filtration Tests *652*
- Tests for Renal Blood Flow *654*
- Tests of Tubular Function *654*
- Other Miscellaneous Tests to Assess Renal Function *656*

37. Liver Function Tests **659**
- Functions of the Liver *660*
- Tests Based on Abnormalities of Bile Pigment Metabolism *660*
- Tests Based on Liver's Part in Carbohydrate Metabolism *663*
- Tests Based on Changes in Plasma Proteins *664*
- Tests Based on Abnormalities of Lipids *665*
- Tests Based on the Detoxicating Function of the Liver *665*
- Tests Based on Excretory Function of Liver *666*
- Formation of Prothrombin by Liver *666*
- Tests Based on Amino Acid Catabolism *667*
- Tests Based on Drug Metabolism *668*
- Value of Serum Enzymes in Liver Diseases *668*

38. Gastric Function Tests **675**
- Examination of Resting Contents *676*
- Fractional Gastric Analysis: Using Test Meals *677*
- Achylia Gastrica *678*
- Stimulation Tests *678*
- Serum Pepsinogen *681*
- Tubeless Gastric Analysis *681*

39. Thyroid Function Tests **683**
- Tests Based on Primary Function of Thyroid *684*
- Tests Measuring Blood Levels of Thyroid Hormones *686*
- Tests Based on Metabolic Effects of Thyroid Hormones *687*
- Thyroid Scanning *688*
- Immunological Tests for Thyroid Functions *688*

40. Water and Electrolyte Balance and Imbalance **693**
- Distribution of Body Water and Electrolytes *694*
- Distribution of Electrolytes in the Body *695*
- Normal Water Balance *697*
- Normal Electrolyte Balance *697*
- Regulatory Mechanisms *698*
- Abnormal Water and Electrolyte Metabolism *701*
- Dehydration *701*
- Pathological Variations of Water and Electrolytes *705*
- Water Intoxication *706*

41. Acid Base Balance and Imbalance **708**
- Acid-base Balance in Normal Health *709*
- Buffers *709*
- Acids Produced in the Body *710*
- Mechanisms of Regulation of pH *710*
- Role of Different Buffer Systems *711*
- Role of Respiration in Acid-base Regulation *713*
- Renal Mechanisms for Regulation of Acid-base Balance *714*
- Acid-base Imbalance *717*
- Acidosis *717*
- Alkalosis *719*

42. Cerebrospinal Fluid (CSF)—Chemistry and Clinical Significance **725**
- Appearance of Cerebrospinal Fluid *726*
- Pressure of CSF *727*
- Biochemical Changes in CSF *727*
- Other Chemical Constituents *730*
- Lange Colloidal Gold Reaction *730*

43. Radioactivity: Radioisotopes in Medicine **734**
- Radioactivity *734*
- Radioisotopes *735*
- Radioisotopes in Medicine *736*
- Radiation Hazards *736*
- Diagnostic and Therapeutic Uses of Radioisotopes *737*

SECTION SIX: MISCELLANEOUS

44. Diet and Nutrition **745**
- Energy Metabolism *745*
- Caloric Value of Foods *745*
- BMR *747*
- Respiratory Quotient (RQ) *749*
- Caloric Requirements *750*
- Nutritional Aspects *753*
- Protein Factor in Nutrition *753*
- Role of Carbohydrates in Diet *758*
- Role of Lipids in the Diet *760*
- Role of Minerals in Diet *761*
- Balanced Diet *761*
- Protein-energy Malnutrition (PEM) *763*
- Obesity *763*
- Diet in Pregnancy and Lactation *769*
- Composition and Nutritive Value of Common Foodstuffs *771*
- Tea, Coffee and Cocoa *775*

45. Environmental Biochemistry **780**
- Lead *785*
- Arsenic *786*
- Food Pollution *787*

46. Biochemistry of Cancer **790**
- Biochemistry of Cancer Cells and Carcinogenesis *791*
- Properties of Cancer Cells *791*
- Etiology of Cancer (Carcinogenesis) *792*
- Experimental Carcinogenesis *793*

- Growth Factors *799*
- Apoptosis: Biochemistry and Role in Carcinogenesis *804*
- Biochemistry of Metastasis *806*
- Oncogenic Markers or Tumour Markers *808*
- What are Tumour Markers? *808*
- Characteristics of an Ideal Tumour Marker *808*
- Clinical Usefulness of Different Tumour Markers *809*
- Commonly Used Tumour Markers *810*
- Tumour Markers not used Commonly *812*

47. Biophysics: Principles and Biomedical Importance 815
- Hydrogen Ion Concentration (pH) *815*
- Buffers *817*
- Diffusion *817*
- Osmosis and Osmotic Pressure *818*
- Dialysis *819*
- Gibbs-Donnan Membrane Equilibrium *819*
- Surface Tension (ST) *820*
- Viscosity *821*
- Colloids *822*

48. Introduction to Biochemical Techniques 825
- Spectrophotometry *825*
- Chromatography *827*
- Electrophoresis *830*
- pH Metre *833*
- Immunoassay Techniques *834*
- Automation in Clinical Laboratories *836*

49. Biochemistry of AIDS 838
- Discovery of HIV *838*
- Retroviral Background *838*
- Structure and Molecular Features of HIV *839*
- Virus Life Cycle *840*
- Modes of Transmission *841*
- Natural History of HIV Infection *842*
- Immunological Response in HIV *845*
- Diagnosis of HIV Infection *845*
- Antiretroviral Therapy (ART) *847*

50. Biochemistry of Ageing 851
- Definition of Ageing *851*
- Life Span and Life Expectancy *851*
- Ageing Theories *851*
- In Search of the Secrets of Ageing *852*
- Oxygen Radicals *853*
- Antioxidants and Ageing Gerbils *853*
- Glucose Crosslinking *853*
- DNA Repair *854*
- Heat Shock Proteins *855*
- Hormones *855*
- Hormones and Research on Ageing *855*
- Hormone Replacement *856*
- Growth Factors *856*
- Role of Dopamine Receptors in Ageing *856*
- Macular Degeneration of Eye *857*

Bibliography *859*

Index *861*
