Contents

1. Basic Concept of Molecular Genetics 1
- Introduction
- Concept of Genetics
  - Basic Genetic Terms
- Practical Applications of Genetics in Nursing
- Impact of Genetic Conditions on Families
  - Factors Influencing the Impact of Genetic Conditions on Families
  - Role of Nurses in Managing the Impact of Genetic Conditions on Families
- Review of Cellular Division
  - Cell Cycle
  - Mitosis
  - Meiosis
  - Meiosis II
- Characteristics and Structure of Genes
  - Types of Genes
  - Functions of Genes
  - Nucleic Acid
- Protein Biosynthesis
  - Steps of the Protien Synthesis
- Genetic Code
- Naming Genes
- Chromosome
  - Functions of Chromosome
  - Chromosomes—Sex Determination
- Chromosomal Aberrations (Chromosomal Mutation)
- Mechanism of Inheritance
  - Laws of Inheritance
  - Mendelian Theory of Inheritance
  - Patterns of Inheritance
  - Sex-linked Inheritance
- Facts About Transmission of Genetic Disorders
- Multiple Alleles and Blood Groups
  - Multiple Alleles
  - Blood Group System

- Gene Mutation (Errors of Transmission)
  - Causes of Gene Mutation
  - Types or Mechanism of Gene Mutation
- Effect of Gene Mutations on Health and Development
- Reduced Penetrance and Variable Expressivity
- Anticipation

2. Emerging Paradigm of Genetics in Nursing 98
   - Introduction
   - Genetics Nursing Practice Milestones
   - Roles of Nurses in Genetics
   - Importance of Genetics in Nursing Curriculum
   - Barriers and Approaches for Implementation of Genetics in Nursing
   - Assumptions Regarding Genetics and Health Care in Future
3. Maternal and Prenatal Genetics 112
   - Introduction
   - Genetics and Infection
     - Role of Nurses
   - Consanguinity Atopy
     - Genetic Aspect of Consanguinity
     - Role of Nurses
   - Prenatal Nutrition and Food Allergies
     - Facts of Prenatal Nutrition and Food Allergies in Children
     - Role of Prenatal Nutrition in Prevention of Genetic Disorders
   - Maternal Age
     - Genetic Aspect of Advanced Maternal Age
     - Role of Nurses
   - Maternal Drug Therapy
     - The Effects of Pregnancy on Drug Disposition (Pharmacokinetics)
     - The Effect of Drugs on the Pregnancy, Fetus or Neonate (Teratogenicity)
     - Role of Nurses
   - Genetic Effect of Radiation, Drugs and Chemicals
     - Factors Influence the Effect of the Teratogens
     - Effects of Chemicals and Drugs
     - Nursing Considerations
     - Effects of Radiation
     - Radiation Exposure and Termination of Pregnancy
     - Role of Nurses

- Prenatal Genetic Testing and Diagnosis
  - Purposes of Prenatal Diagnosis
  - Indications for Prenatal Testing and Diagnosis
  - Prenatal Screening
  - Types of Prenatal Testing and Diagnosis
  - Chorionic Villus Sampling (CVS)
  - Fetal Blood Sampling (FBS)
  - Maternal Blood Tests
  - Fetal Tissue Sampling
  - Fetoscopy
- Preimplantation Prenatal Diagnosis
  - Indications of PGD
  - Genetic Analysis Techniques of PGD
  - Ethical Issues of Prenatal Testing
  - Role of Nurses
- Infertility
  - Subfertility
  - Primary vs Secondary Infertility
  - Genetic Basis of Infertility
  - Genetic Diseases Resulting in Infertility
  - Diagnosis of Infertility
  - Medical Management of Infertility
  - Role of Nurses
- Spontaneous Abortions
  - Types of Spontaneous Abortions
  - Etiology
  - Clinical Manifestations
  - Diagnosis of Spontaneous Abortion
  - Management of Spontaneous Abortion
  - Role of Nurses
- Neural Tube Defects (NTDs)
  - Epidemiology
  - Risk Factors
  - Presentation and Management
  - Prenatal Screening
  - Investigations
  - Management
  - Complications
  - Prevention
  - Role of Nurses

- Down Syndrome
  - Risk Factors
  - Clinical Manifestation
  - Role of Nurses

4. Neonatal and Children Testing or Screening..... 208
   - Introduction
     - Meaning and Purpose
   - Newborn Screening
     - Important Elements in Newborn Screening
     - Common Disorders can be Screened in Newborns
   - Genetic Testing and Screening in Children
     - Approach to Genetic Testing in Children
   - Congenital Abnormalities
     - Types
     - Causes
     - Genetic Testing/Screening
     - Management
   - Developmental Delay
     - Risk Factors for Developmental Delay
     - Warning Signs of a Developmental Delay
     - Screening of Developmental Delay
     - Early Intervention Services for Developmental Delay
   - Dysmorphism
     - Types of Dysmorphism
     - Etiology
     - Common Dysmorphic Syndromes
     - Genetic Testing/Screening
     - Management
5. Genetic Conditions of Adolescents and Adults..... 234
   - Genetic Statistics
   - Naming Genetic Conditions
     - Common Genetic Conditions Discussed in the Chapter
   - Cancer Genetics: Familial Cancer
     - Familial Cancer
     - Management of Familial Cancer
   - Inborn Errors of Metabolism (IEM)
     - Classification of Inborn Errors of Metabolism
     - Clinical Manifestations
     - Diagnosis
     - Management

- Phenylketonuria
  - Clinical Manifestations
  - Diagnosis (Screening)
  - Treatment
- Maple Syrup Urine Disease
  - Clinical Manifestations
  - Diagnosis
  - Management
- Gaucher's Syndrome
  - Clinical Manifestations
  - Diagnosis
  - General Assessment
  - Complications
  - Management
- Blood Group Alleles and Hematological Disorders
  - Blood Group Alleles
- Hematological Disorders
  - Hemolytic Anemia
  - Hereditary Coagulopathies
- Hemolytic Disease of Newborn
  - Pathogenesis
  - Clinical Manifestation
  - Management
- Glucose-6-Phosphate Dehydrogenase Deficiency
  - Signs and Symptoms
  - Diagnosis
  - Treatment
- Hereditary Spherocytosis
  - Pathogenesis
  - Clinical Manifestations
  - Diagnosis
  - Management
- Thalassemia
  - Alpha Thalassemia
  - Beta Thalassemia
  - Clinical Manifestations
  - Diagnosis
  - Staging
  - Complications
  - Management

- Sickle-cell anemia
  - Causes and Pathology of Sickle-cell anemia
  - Sickle cell Trait
  - Clinical Manifestations
  - Diagnosis
  - Complications of Sickle-cell anemia
  - Management
- Blackfan-Diamond Anemia
- Hemophilia
  - Types and Causes
  - Clinical Manifestations
  - Diagnosis
  - Management
- von Willebrand Disease (vWD)
  - Types of von Willebrand Disease
  - Clinical Manifestations
  - Diagnosis
  - Management
  - Specific Treatments
- Congenital Amegakaryocytic Thrombocytopenia (CAMT)
- Genetic Hemochromatosis
  - Etiology and Genetic Basis
  - Inheritance Pattern
  - Clinical Manifestations
  - Diagnosis
  - Management
- Huntington's Disease
  - Genetic Basis
  - Inheritance Pattern
  - Clinical Manifestations
  - Diagnosis
  - Management
- Mental Illness
  - Causes of Mental Illness
  - Management
- Therapeutic Approaches for Genetic Disorders
- Nursing Management in Genetic Disorders
  - Assessment
  - Nursing Diagnosis, Outcomes, and Interventions

6. Services Related to Genetics 306
- Introduction
- Genetic Testing
  - Purposes of Genetic Testing
  - Types of Genetic Testing
  - Benefits of Genetic Testing
  - Negative Outcomes of Genetic Testing
  - Interpreting Genetic Test Results
  - Ethical, Legal, and Social Issues in Genetic Testing
  - Role of Nurses in Genetic Testing
- Human Genome Project
  - Meaning and Importance of Genome
  - Goals of Human Genome Project
  - Accomplishments of Human Genome Project
  - Nursing and the Human Genome Project
- The Genomic Era
  - Significant Advancement in Genomic Era
  - Negative Aspects of Genomic Era
  - Positive Aspects of Genomic Era
- Gene Therapy
  - Types of Gene Therapy
  - Approaches of Gene Therapy
  - Vectors Used in Gene Therapy
  - Shortcomings of Gene Therapy
  - Facts of Gene Therapy
  - Pharmacological Gene Therapy
  - Ethical Issues Regarding Gene Therapy
  - Role of Nurses in Gene Therapy
- The Eugenic Movement
  - Purpose of Eugenic Movements
  - Types of Eugenic Movement
- Genetic Counseling
  - Purpose of Genetic Counseling
  - Phases of Genetic Counseling
  - Role of Nurses in Genetic Counseling
- Pharmacogenomics
