Contents

1. Introduction to Dosage Forms **1**

Origin of dosage forms 1
Types of commonly used dosage forms 3
Pharmaceutical ingredients 18
Principles of dosage form design 20
Approaches in dosage form design 24
Drug development and United States FDA 29

2. Pharmaceutical Excipients **37**

Diluents 38
Solvents 44
Suppository bases 47
Ointment bases 50
Surfactants 53
Viscosity enhancers 57
Suspending and thickening agents 60
Emulsifying agents 65
Wetting agents 68
Flocculating agents 69
Binders 70
Disintegrants 72
Lubricants 76
Glidants 79
Antiadherents 80
Antioxidants 80
Preservatives 82
Colorants 83
Flavoring agents 85
Sweetening agents 86
Pharmaceutical-excipient interactions 88

3. Preformulation **91**

Physicochemical parameters 92
Drug and product stability 109
Powder flow properties 116
Compatibility tests 118

4. Quality Management in Pharmaceutical Industry **122**

Quality control and quality assurance 123
Good manufacturing practices 129
International organization for standardization 142
Total quality management 147
Pharmaceutical process validation 149
Effluent testing and treatment 191
Intellectual property rights 193

5. Dissolution Testing of Dosage Forms **215**

Theories of dissolution 216
Biopharmaceutical classification system 219
Dissolution testing methods 221
Selection of dissolution medium 227
Mathematical models 229
Dissolution profile comparison using similarity factor, f_2 234

6. Bioavailability and Bioequivalence Studies **239**

Bioavailability 239
Methods of assessing bioavailability 240
Bioequivalence studies 250
Types of bioequivalence studies 252
Methods to enhance solubility and bioavailability of drugs 258
In vitro-in vivo correlation 271

7. Stability Testing of Pharmaceuticals **278**

Rate equations 281
Effect of temperature and pH on reaction kinetics 286
Pathways of drug degradation 290
Prediction of shelf-life 297

Objectives and design of stability testing 301
Stability testing of dosage forms 305
Accelerated testing and prediction 309
Overages 316
Stability testing of pharmaceutical products in global environment 317
International Conference on Harmonization Guidelines 320

8. Polymers—Synthesis, Properties and Applications 335
Polymer synthesis 336
Classification of polymers 342
Properties of polymers 345
Biodegradation of polymers 355
Pharmaceutical applications 357

9. Prodrugs—An Overview 368
Classification of prodrugs 369
Applications of prodrugs 370

10. Drug Delivery Systems 384
Types of drug delivery systems 388
Ion-exchange systems 395
Osmotically controlled systems 397
Floating drug delivery systems 407
Nanoparticles 411
Resealed erythrocytes 419
Liposomes 424
Niosomes 440
Dendrimers 447
Transdermal drug delivery systems 454
Ocular drug delivery systems 470
Nasal drug delivery systems 475
Vaginal and uterine systems 480
Protein and peptide delivery 484
Drug delivery to brain 490

11. Fundamentals of Cosmetics **502**

Structure of skin 505
Hair biology 510
Nail anatomy 514
Creams 516
Sunscreens preparations 525
Face powder 527
Lipsticks 529
Hair preparations and treatments 532
Nail preparations 555
Men's toiletries 560
Antiperspirants and deodorants 565
Eye make-up 567
Baby care products 569
Dentifrices 572
Quality control and evaluation of cosmetics 575

12. Packaging of Dosage Forms **593**

Glass 597
Plastics 602
Metals 609
Paper and board 610
Rubber 611
Pharmaceutical packaging technology 613
Evaluation of container-closure system 619

Index 631
