Contents

SECTION 1: ESSAYS

1. Discuss the importance of diagnosis and treatment planning in fixed partial denture 3
2. List the ideal requirements of an abutment tooth and describe the steps taken to maintain biological integrity while preparing teeth for fixed partial denture 9
3. Describe various methods used for gingival retraction and add a note on the advantages of fluid control and tissue displacement 15
4. Describe the methods used to classify fixed bridges. Add a note on types of retainers used in fixed partial dentures 22
5. Define and classify retainers. List the advantages and disadvantages of partial veneer crown over other types of retainers. What are the factors that come into play in the selection of retainers? 28
6. Define retention and resistance form in fixed partial denture. What are the factors affecting retention and resistance in posterior tooth preparation? 33
7. Classify finish lines. Enumerate the functions, indications, advantages and disadvantages of finish lines. Add a note on selection of type of finish line to be used 36
8. Illustrate with diagrams, the tooth preparation on right upper central incisor for receiving porcelain jacket crown. Add a note on the advantages, indications and contraindications of all porcelain jacket crown 43
9. Define a crown and mention the advantages, disadvantages and indications of a full metal crown. Describe in detail, with diagrams, the step-by-step procedure in the preparation of a full-metal crown on a mandibular first molar 46
10. Describe in detail, with diagrams, the step-by-step preparation of a maxillary canine to receive a three quarter crown. Explain and justify different impression techniques for fixed partial denture 50
11. Name the component parts of a bridge. Define and classify pontics. Add a note on selection of pontic design in anterior and posterior teeth. What are the requirements of a pontic? 60
12. What are the biological, mechanical and esthetic considerations in designing a pontic? Add a note on fabrication of pontics 67
13. Describe different types of provisional restorations. Describe various techniques used for making provisional restoration for anterior and posterior tooth preparation 72
14. Describe ideal requirements of luting agents and various luting agents used in crown and bridge cementing. Explain the procedure and care to be taken to lute porcelain jacket crowns 76
15. Classify adhesive bridges/resin-bonded bridges. Cite the advantages, disadvantages, indications, contraindications and preparation steps. Add a note on types of bonding to metal and tooth 82

16. What are the requirements of dies? Describe materials used in preparation of dies and few techniques used for preparing dies? 88
17. Classify ceramics. Enumerate its advantages and disadvantages. Explain the mechanism of bonding and describe the laboratory steps involved in fabrication of different ceramics 95
18. What are the types of veneering materials? Describe their advantages, disadvantages and indications. Add a note on the recent advances in veneering materials used in fixed partial denture 103
19. Discuss in detail failures in fixed dental prosthesis 107
20. Classify and discuss on various impression procedures involved in implant-supported prosthesis 112
21. Discuss on implants for fixed prosthesis work 118
22. Classify types of implants and discuss the role of surface topography of implants in osseointegration 123
23. Explain procedural options for single-tooth implant prosthesis 127
24. Discuss the immediate loading and progressive loading of endosseous implants. 130
25. Occlusal consideration for implant-supported prosthesis 134
26. Recent advances in surgical techniques 139
27. Discuss implant failures and precautions that need to be taken 142

SECTION 2: SHORT NOTES

1. Diagnostic aids in fixed partial denture 149
2. Importance of diagnostic casts 150
3. Advantages, disadvantages, indications and contraindications of fixed partial dentures 151
4. Importance of radiologic examination in crown and bridge prosthesis 152
5. Questionable abutments 153
6. Mouth preparation in fixed partial denture 155
7. Requirements of a crown 157
8. Double arch impression technique 158
9. Double mix technique 160
10. Adhesives in dentistry/dentin bonding agents 161
11. Factors in shade matching in all ceramic restorations 163
12. Methods to remove crowns and bridge 165
13. Ante's law and its significance 167
14. Shortened dental arch concept (SDA Concept) 169
15. Rigid connectors 169
16. Soldering 171
17. Cast core jacket crown 174
18. Richmond crown 179
19. Davis crown 181
20. Axio-proximal grooves 182

21. Pier abutment 184
22. Causes of abutment failure 187
23. Mesial half crown 189
24. Cantilever fixed partial denture 190
25. Describe cementation of all ceramic restorations 191
26. Recent advances in Investment materials 193
27. Retention in fixed partial denture 195
28. Instructions to crown and bridge patients regarding care and maintenance 197
29. Articulators 197
30. Fixed removable prosthodontics 199
31. Dental laboratory form 201
32. Dahl's appliance 202
33. Management of tooth surface loss (TSL) 205
34. Flowchart for surgical procedure in implant placement 207
35. All-ceramic restoration 208
36. Material selection and failures in RBFPD 212
37. Osseointegration 214
38. Alloys used in fixed partial denture 216
39. Non-rigid connectors/stress breakers in fixed partial denture 219
40. Wax patterns 221
41. Functionally generated pathways (Meyer) 227
42. Interocclusal records 229
43. Lug seat 232
44. Soft tissue mask for implant models 233
45. Recall and maintenance 234
46. Treating tilted molars 236
47. Telescopic crown 237
48. Finishing and polishing 238
49. Mention the anatomical concerns for implant placement in posterior maxilla and mandible region 241
50. Pickling 242
51. Defects in casting 243
52. Myofascial pain dysfunction syndrome 245
53. Implant-supported fixed partial denture 247
54. Full-mouth rehabilitation 250
55. Contraindications for implant placement 253
56. Laboratory procedures in fixed partial denture 253
57. Tensofrictional resistance 256

SECTION 3: MCQ, EXTENDED MATCHING QUESTIONS, SHORT ANSWER QUESTIONS, LAMINATE VENEERS AND RECENT ADVANCES IN FIXED PARTIAL DENTURE

1. Introduction to FPD 261
2. Fundamentals of occlusion 266
3. Articulation and articulators 271
4. Interocclusal records 274
5. Treatment planning single tooth 277
6. Treatment planning for missing tooth 280
7. Principles of tooth preparation 283
8. Full coverage restorations 290
9. Partial coverage restorations 298
10. Intracoronal restorations 303
11. Provisional restoration 307
12. Fluid control 312
13. Impressions 319
14. Working cast and dies 325
15. Cementation 328
16. Pontics 333
17. Failures 339
18. Laminate veneers 343
19. Porcelain laminate veneers 345
20. Fixed partial dentures—an insight 352
