Contents

1. **Basic Concept** **1-36**
   Carbohydrates, Amino acids, Proteins, Lipids, Nucleic acids, Enzymes, Vitamins.
2. **Erythropoietic System** **37-57**
   Hemoglobin, Myoglobin, Hemoglobinopathies, Thalassemias, Blood pH regulation, Glycolysis, HMP shunt, Glutathione (redox) system, Vitamin B_{12}, Folic acid, Pyridoxine, Ascorbic acid, Iron metabolism.
3. **Respiratory System** **58-74**
   TCA Cycle, Cellular respiration, Biological oxidation, Oxidative stress- antioxidant system, Vitamin E.
4. **Cardiovascular System** **75-89**
   Fatty acid metabolism, Synthesis of triglycerides, Cholesterol metabolism, Ketone body metabolism, Lipoprotein metabolism, Eicosanoids, Atherosclerosis.
5. **Gastrointestinal System** **90-98**
   Digestion and absorption of carbohydrates, lipids, proteins, Gastric function tests, Dietary fibres.
6. **Hepatobiliary System** **99-112**
   Glycogen metabolism, Gluconeogenesis, Bile acids, Bilirubin metabolism, Jaundice, Liver function tests, Vitamin K, Urea cycle.
7. **Renal and Electrolyte System** **113-124**
   Role of kidney in acid base regulation, Metabolic acidosis, Metabolic alkalosis, Renal function tests, Amino acid metabolism.
8. **Endocrine System** **125-140**
   Mechanism of action of hormones, Pituitary hormones, Thyroid hormones, Parathyroid hormone, Calcitonin, Calcium-Phosphorous Homeostasis, Calcitriol, Pancreatic hormones, Adrenocorticosteroids, Blood glucose homeostasis, Diabetes mellitus.

9. **Reproductive System** **141-142**
Synthesis and regulation of Sex hormones

10. **Growth, Development and Nutrition** **143-151**
Trace elements, Biochemical principles of nutrition, Biochemistry of tumor metabolism.

11. **Autonomic Nervous System and Special Senses** **152-162**
Neurotransmitters, Vitamin A, Cell membrane.

12. **Musculoskeletal System** **163-166**
Muscle metabolism, Creatinine, Creatine phosphate, Muscle markers.

13. **Molecular Biology** **167-192**
Nucleic acid metabolism, Replication, DNA damage and repair, Cell cycle, Transcription, Translation, Mutations, Polymerase chain reaction, Blotting techniques, Restriction length polymorphism, Recombinant DNA technology, Gene therapy, Gene library, Regulation of gene expression.
