Contents

1. Surgical Anatomy of Cerebellopontine Angle **1**

- Neurovascular Anatomy of Posterior Cranial Fossa: Superior, Middle and Inferior Zones 1
- Operative Endoscopic Anatomy 4
- Anatomy of Internal Auditory Meatus 6

2. Instruments **9**

- Microscopic Set-up 9
- Video-Endoscopic Equipment and Set-up 9
- Monopolar and Bipolar Cautery 10
- Surgical Drill and Handpieces 11
- Foot Controls 11
- General Instrument Set 11
- Microsurgical Instruments for Retrosigmoid Approach 12
- Consumable Materials 13
- Suture Materials 17
- Other Medicaments 18
- Other Disposable Materials 18

3. Nerve Monitoring for Cerebellopontine Angle Surgery **19**

- Intraoperative Continuous Cochlear and Facial Nerve Monitoring for Surgery of Acoustic Neuroma 19
- Continuous Cochlear and Facial Nerve Monitoring and its Significance 22
- Cochlear Nerve Mapping by Using DNAP Electrode 24
- Facial Nerve Mapping 25
- Special Features of DNAP/FREMAP Monitoring Instrument 25

4. Minimally Invasive Retrosigmoid Approach (MIRA) **29**

- Indication 30
- Basics of Lateral Skull Base Surgery 30
- Role of Cadaver Dissection and Knowledge of Temporal Bone and CPA Anatomy 30

- Importance of Good Exposure 31
- Hemostasis During Surgery 31
- Closure 32
- Role of Systematic Training and Standardization of Surgical Steps 32
- Surgical Procedure 32
- Endoscope-Assisted Microsurgery 48
- Postoperative Care 52
- Postoperative Complications 54

5. Vestibular Neurotomy by Minimally Invasive Retrosigmoid Approach 58

- Pathophysiological Basis for Vestibular Neurotomy 59
- Indications for Vestibular Neurotomy 60
- Surgical Technique 60
- Cochlear Nerve Monitoring and Mapping for Vestibular Neurotomy 64
- Results 66

6. Vascular Compression Syndromes 71

- Pathophysiology 71
- Imaging of Neurovascular Conflicts of CPA 75
- Vascular Compression Syndromes 79
- Selection Criteria for Operative Treatment 83
- Microvascular Decompression Surgery 85
- Variations in Surgical Technique in Different Vascular Syndromes 87
- Microvascular Decompression of Hemifacial Spasm 98
- Different Types of Conflicts Observed in MVD for Hemifacial Spasm 101
- Microvascular Decompression of the Vestibulocochlear Nerve 118
- Microvascular Decompression for Glossopharyngeal Neuralgia 120
- Results after Microvascular Decompression Surgery 122
- Surgical Results of MVD for Trigeminal Neuralgia 122
- Surgical Results of MVD for Hemifacial Spasm 124
- Results after MVD for Unilateral Incapacitating Tinnitus 128
- Postoperative Hearing 129

7. Hearing Preservation Surgery for Acoustic Neuroma 134

- Our Treatment Philosophy in Acoustic Neuroma Surgery 135
- Surgical Technique 137
- Postoperative Care 165
- Results 165

8. Auditory Brainstem Implants 171

- Indication and Patient Selection 172
- Applied Anatomy for the Auditory Brainstem Implant 172
- Surgical Technique 173
- Auditory Brainstem Implant for Congenitally Deaf Children with Bilateral Cochlear Nerve Aplasia 180
