Contents

SECTION 1 Pathology

1. Introduction to Clinical Pathology **3**

Terminology in Pathology 3
Branches of Pathology 4

2. Cellular Pathology **7**

Cell Organelles 7
Functions of Cell 9
Cell Pathology 10
Overview of Cell Injury 10
Types of Cell Death 17

3. Inflammation **22**

Causes of Inflammation 22
Effects of Inflammation 23
Types of Inflammation 24
Repair—Cell Growth and Regeneration 29

4. Pathology Laboratory **33**

Levels of Laboratories 33
Infrastructure 34
Safety in Laboratories 35
Handling Biomedical Waste 36

5. Tumor Markers **42**

Types of Tumor Markers 42
Uses of Tumor Markers 43
Limitations of Tumor Markers 44
List of Tumor Markers 44
Testing of Tumor Markers 49

6. Electrolytes **50**

Introduction and Classification 50
Serum Sodium and Potassium 51

Urine Sodium and Potassium 54
Serum and Urine Chloride 55
Serum and Urine Phosphorus 56
Serum and Urine Calcium 57

7. Body Fluid **59**

Seminal Fluid 59
Amniotic Fluid 62
Cerebrospinal Fluid 64
Pericardial Fluid 65
Pleural Fluid 69
Peritoneal Fluid 73
Synovial Fluid 76

8. Urine Analysis **79**

Collection and Preservation 79
Physical Examination 79
Chemical Examination 81
Microscopic Examination 82

9. Stool Analysis **87**

Macrosopic Examination 87
Chemical Examination 88
Microscopic Examination 88

10. Sputum Examination **91**

Clinical Significance 91
Macroscopic Assessment 93
Sputum Microscopy 93
Sputum Culture 96

11. Automation in Pathology Laboratory **98**

Automation Objective 98
Urilyzer 102
Multistix Urinalysis Strips 103
Polymerase Chain Reaction 105

SECTION 2 Hematology

12. The Blood **111**

Blood 111
Blood Cells 111

Plasma 114
Functions of Blood 115

13. Hemopoiesis **116**

Erythropoiesis 117
Leukopoiesis 118
Thrombopoiesis 120

14. Collection of Blood **122**

Arterial Blood Collection 122
Capillary Blood Collection 122
Venous Blood Collection 123
Use of Evacuated Tube for Vein Punctures 126

15. Anticoagulants **129**

Chemical Anticoagulants 129
Biological Anticoagulant: Heparine 130

16. Total RBC Count **131**

Hemocytometer 132
Procedure 132
Calculations 133
Clinical Significance 133

17. Total White Cell Count **135**

Hemocytometer 136
Procedure 136
Calculations 137
Clinical Significance 137

18. Differential Leukocyte Count **138**

Preparation of Blood Smear 138
Staining of Blood Smear 139
Microscopic Examination 139
Clinical Significance 141

19. Absolute Eosinophil Count **143**

Indirect Method 143
Direct Method 143
Clinical Significance 144

20. Erythrocyte Sedimentation Rate **145**

Westergren Method 145
Wintrobe Method 146

Possible Errors in ESR 147
Factors Affecting ESR 147

21. Packed Cell Volume **148**

Macrohematocrit 148
Microhematocrit 149

22. Hemoglobin Estimation **151**

Sahli's Acid Hematin Method 151
Colorimetric Method 152
Specific Gravity Method 153
Gasometric Method 153
Chemical Method 153
Clinical Importance 153

23. Hemoglobinopathies **154**

Structure of Hemoglobin 154
Hemoglobinopathies 154
Diagnosis 155

24. Red Cell Indices **158**

Mean Cell Volume 158
Mean Cell Hemoglobin 158
Mean Cell Hemoglobin Concentration 159
Clinical Significance 159

25. Special Blood Cell Tests **160**

Lupus Erythematosus 160
Osmotic Fragility 162
Fetal Hemoglobin 164
Heinz Bodies 167

26. Reticulocyte Count **169**

Principle 169
Procedure 169
Clinical Significance 170

27. Sickle Cells Preparation **171**

Sickle Cell Trait 171
Principle 172
Procedure 172

28. Morphology of Normal and Abnormal RBCs 173

Normal Morphology 173
Color Reaction 173
Size Variations 174
Shape Variation 174
Other Conditions 176
Abnormalities in Normal Content of RBC 176

29. Bone Marrow 178

Structure and Function 178
Sample Collection 179
Preparation of Bone Marrow Film 180
Staining of Bone Marrow Aspirate Slides 180
Importance of Detection of Sideroblast 182
Sample Report 184

30. Blood Coagulation 185

Coagulation Factors 185
Mechanism of Coagulation 186
Hemostasis 187

31. Hemorrhagic Disorders 189

Bleeding Time 190
Whole Blood Coagulation Time 191
Clot Retraction 192
Prothrombin Time 192
Platelet Count 193
Tourniquet Test 194
Activated Partial Thromboplastin Time 194
Purpura 195

32. Hemophilia and Polycythemia 196

Hemophilia 196
Polycythemia 198

33. Anemia 200

Classification 200
Thalassemia (Cooley's anemia) 202
Schilling Test 202

34. Leukemia **203**

Classification on the Basis of Course of Disease 203
Classification on the Basis of Cell of Origin 203

35. Hemoparasites **206**

Plasmodium (Malaria) 206
Leishmania (Kala-Azar) 216
Trypanosoma (Sleeping Sickness) 221
Wuchereria Bancrofti (Filariasis) 224

36. Analyzers in Hematology **230**

Hematology Analyzer (Cell Counter) Technology 230
Factors to Consider when Buying a Hematology Analyzer 232
Automation in ESR 235

SECTION 3 Blood Banking

37. Historical Aspect **241**

Definition 241
History 241

38. Organization and Operation of Blood Bank **245**

Objectives of the Blood Bank 245
Main Functions of the Department 246
Operation of Blood Bank 249
Documentation and Record Maintenance 252

39. Immunohematology and Serum Immunoglobulin **254**

Antigens 254
Antibodies 255
General Functions of Immunoglobulins 257

40. ABO Blood Group System **259**

Biochemistry of the ABO System 261
Production of A, B, and H Antigens 261
Subgroups 262

41. Rhesus Blood Group System **264**

Rhesus Factor 264
Universal Donor and Universal Acceptor 265
Rhesus System Inheritance 267

42. Other Blood Group System **269**

Other Types of Blood Grouping 269
Bombay Blood Group 272

43. Preparation and Preservation of Antisera **273**

Antisera 273
Hybridomas 274

44. Technique of Blood Grouping and Crossmatching **275**

ABO Blood Grouping 275
Rh Blood Typing 277
Crossmatching 278

45. Coombs' Test **281**

Direct Coombs' Test 281
Indirect Coombs' test 283
Determination of D^u 284
Antibody Titration 284

46. Blood Transfusion Technique **286**

Preparation and Properties of Anticoagulant 286
Donor Selection 288
Blood Collection (Phlebotomy) 290
Care of Collected Blood Unit 292

47. Transfusion Reactions **294**

Types of Transfusion Reactions 294
Transfusion Transmitted Diseases 298

48. Hemolytic Disease of Newborn **299**

Causes 299
Clinical Features 300
Diagnosis 301

49. Exchange Transfusion **303**

Selection of Blood for Exchange Transfusion 303
Types of Exchange Transfusion 304
Exchange Transfusion Techniques 304
Risks Associated with Exchange Transfusion 305

50. Transfusion-Transmitted Diseases **306**

Viruses 307
Bacterial Contamination 308
Parasitic Infection 309

51. Blood Component Transfusion **311**

Whole Blood 313
Red Cell 313
Platelet Transfusion 315
Granulocytes 317

52. Hemapheresis **319**

Plasmapheresis 319
Cytapheresis 321

53. Recent Advances in Blood Banking **323**

Stem Cells 323
Artificial Blood 325
Molecular Typing 329
Pathogen Inactivation Methods 333
Recent Crossmatch Techniques 335

Index *343*
