Contents

A TB OF LUNGS AND OTHER ORGANS

1. Testicular TB with dissemination and miliary TB 3
2. Miliary TB 4
3. Caseous pneumonia of right lung—progressive primary pulmonary TB 5
4. Endobronchial TB of lingula 7
5. TB of left lower lobe of lung 9
6. Endobronchial TB of right main and lower lobe bronchial involvement 11
7. Endobronchial TB of right upper and lower lobe bronchi 13
8. Primary tubercular infection of the lung progressing to miliary lesion and caseous pneumonia of the left lung 15
9. Endobronchial TB in the left upper lobe of the lung 17
10. Miliary TB in a patient in iatrogenic immunosuppression for postrenal transplant state 20
11. Resistant pulmonary TB with left hydropneumothorax 22
12. Primary tubercular infection of left lung progressing to caseous pneumonia and pleural effusion with thickening 24
13. Large tuberculoma mimicking a tumour in the right lower lobe of lung 26

B TB OF LYMPH NODES AND OTHER ORGANS

14. Mediastinal and cervical tubercular lymphadenopathy with emergence of acquired resistant strain of tubercle bacilli 31
15. Tubercular cervical lymphadenitis and pleuropericardial effusion 32
16. TB of right upper lobe of the lung; and resistant TB of right supraclavicular node 33
17. Tubercular intrathoracic and intraabdominal lymphadenopathy 34
18. TB of left paratracheal and mediastinal lymph nodes; the infection and inflammation spreading through the chest wall at the early stage of ATT 35
19. TB of intrathoracic and intraabdominal lymph nodes, small intestine and left lower lobe of lung 37

C TB OF BONES AND JOINTS AND OTHER ORGANS

20. TB of spines of C7, D1 vertebrae with retropharyngeal and paravertebral cold abscesses, and quadriplegia 43
21. TB of chest wall at right parasternal area 44
22. TB of dorsal spines with spinal cord compression and paraplegia; and tubercular left sided pleural effusion 45

23. Tubercular bilateral pleural effusion and empyema with pleural thickening on right side. Tubercular spondylitis of D10, D11 with destruction of vertebral bodies and cord compression with paraplegia. Disseminated TB and splenic involvement. Defaulter of ATT 47
24. Tubercular spondylitis of L4 and L5 vertebrae with paraplegia, infection by resistant strain 49
25. TB of spine of D8 transverse process and left 6th rib posteriorly with a large paravertebral abscess extending from D8 to D12 level and producing a subcutaneous bulging at the area, leading to a sinus formation after drainage. Right paratracheal and posterior subcarinal lymphadenopathy 50
26. Pulmonary TB with cold abscess formation on chest wall at the right side of manubrium sternum. TB of right submandibular lymph node 51
27. TB of right sacroiliac joint with osteolytic lesion of right iliac bone and a cold abscess. Pleural thickening of right side 54
28. Tubercular osteomyelitis of left upper-third of tibia, developing while the patient was already taking ATT with good result for pulmonary TB 56
29. Disseminated TB with tubercular osteomyelitis of the lower end of right radius, lung and cervical and mediastinal lymphadenopathy 58
30. TB of spine D6, D7, D9 vertebrae with cord compression and paraplegia and cold abscess formation. TB of lower lobe of left lung 60
31. TB of spine D9 with paravertebral collection 62
32. TB of the head of right humerus. Probably TB of common bile duct and pancreas 64
33. Disseminated TB with tubercular osteomyelitis of the right wrist, brain tuberculomas, miliary shadows in the lungs and intrathoracic tubercular lymphadenitis 66
34. Tubercular osteomyelitis of right 6th rib with cold abscess on the right lateral chest wall 68
35. TB of spine at D1, D2 and D3 with cord compression and paraplegia 69
36. TB of spines of L4 and L5 vertebrae with right sided paravertebral abscess that was extending to psoas and iliac muscles; and opening as the discharging sinuses at lumbosacral and both inguinal regions 70
37. TB of L3 vertebra with cold abscess formation 71
38. TB of anterior chest wall at parasternal area on right side 72

D TB OF PLEURA AND PERICARDIUM

39. Tubercular left sided hydropneumothorax 75
40. Tubercular pericardial effusion—probably complication of primary infection 76

E TB OF THE CNS AND OTHER ORGANS

41. Pulmonary TB followed, after treatment and resolution, by multiple cerebral and cerebellar tuberculomas with multiresistant (acquired) tubercular bacillary infection 79
42. Miliary TB with multiple tuberculomas in both cerebral hemisphere 80

43. Tuberculoma of the left parietal lobe with right sided hemiplegia and grand mal fit; and spread to the parietal bone with destruction and scalp ulceration 81
44. Tuberculoma of brain at the head of left caudate nucleus 83
45. Right sided tubercular pleural effusion due to infection by resistant (primary) strain Mycobacteria; and its dissemination with the development of multiple tuberculomas in both cerebral and cerebellar hemispheres. Antitubercular drugs-induced acute on chronic liver disease, hepatic failure and encephalopathy leading to death 85

F TB OF THE ABDOMEN AND OTHER ORGANS

46. Tubercular peritonitis 89
47. Ileocaecal TB 90
48. Tubercular peritonitis 91
49. Tuberculoma under the anterior abdominal wall infiltrating into the stomach, greater omentum and transverse colon 92
50. Intestinal TB with duodenocolic fistula and small bowel stricture; and tubercular cervical lymphadenopathy 93
51. Ileocaecal and pulmonary TB 95
52. TB of small intestine and peritoneum 97
53. TB of small intestine, peritoneum; and tubercular left pleural thickening 98
54. Ileocaecal TB 99
55. Intraabdominal and disseminated TB 100
56. Tubercular enteritis and peritonitis 102

G DISSEMINATED TB AND MISCELLANEOUS

57. TB of the upper front of right thigh 107
58. TB of breast is rare and cannot be differentiated from a tumour lesion clinically 108
59. TB of lungs with cold abscess on the chest wall on the right side. Chronic reversible renal failure—possible bilateral renal TB 109
60. Tuberculoma of right cerebellar hemisphere 110
61. Resistant TB of sacrum, inguinal lymph nodes with discharging sinuses; and on posterior chest wall. End-stage renal failure on maintenance haemodialysis 111
62. Tubercular abscess on upper abdominal wall 112
63. Disseminated TB with lesions in the lungs (miliary as seen in chest X-ray), right axillary lymph nodes spleen and the tail of pancreas 113
64. Disseminated TB involving lungs, intrathoracic and intraabdominal lymph nodes and spleen 114
65. Disseminated TB with peritoneal, caecal, pleural and intrathoracic lymph nodal involvement 115

Index *119*

Symbols and Abbreviations Used

AFB = Acid fast bacilli
Alk phos = Alkaline phosphatase
ALT = Alanine aminotransferase
AST = Aspartate transaminase
ATT = Antitubercular therapy
BAL = Bronchoalveolar lavage
BP = Blood pressure
Cipro = Ciprofloxacin
CNS = Central nervous system
CT = Computed tomography
ECG = Electrocardiography
ESR = Erythrocyte sedimentation rate
E = Ethambutol
H = Isoniazid
Hb = Haemoglobin
HIV = Human immunodeficiency virus
K = Potassium
LDH = Lactic dehydrogenase
MRI = Magnetic resonance imaging
Na = Sodium
R = Rifampicin
RR = Respiration rate
S = Streptomycin
TB = Tuberculosis
Temp = Temperature
US = Ultrasound
WBC = White blood cell
Z = Pyrazinamide
